PRODUCT SECTION
Individual components
from 46
The COM3LAB learning environment combines experimentation with the advantages of interactive e-learning.

The new Master Unit is the bridge between the experimental panel and the learning software. It contains all necessary measuring instruments and power supplies.

**MASTER UNIT**

- clearly labelled with a functional design
- interfaces to all PC systems
- precise and rapid measuring instruments and signal generators
- robust against electromagnetic interference
- simple and safe in the hands of students
- compatible with all previous COM3LAB courses
EXPERIMENT BOARD

- safe and clearly structured courses for every learning field of electrical engineering
- regular new courses on modern topics
- visible modules and realistic system components
- interactive course guidance with LEDs

INTERACTIVE LEARNING SOFTWARE

- clearly structured, simple operation
- easily understandable theoretical part
- all experiments performed under guidance with learning control tests
- multimedia support content with animations, videos, audio and real measuring instruments with virtual display
THE NEW MASTER UNIT
EVEN BETTER FOR TEACHERS AND TRAINERS

FOR TABLET, PC AND LAPTOP

No matter if and how your IT system changes tomorrow, the new Master Unit fits into any modern infrastructure. Whether USB, WiFi or Ethernet, all interfaces are supported directly, and without adapters.

Windows systems are supported natively, iOS and Android systems can be easily connected via RDP or VNC.

PROTECTION FROM DESTRUCTION

Safety features for a long service life in the teaching laboratory:

- The red security lock keeps the course board mechanically secure and if it is opened, the course board is switched off.
- To meet current regulations, 2 mm security cable can also be used.
- There is a slot for a Kensington lock on the rear side, so that your Master Unit remains in the place where you need it.
- Course board frames made from high-quality material protect the PCB and the furniture against scratches and defects.
- The use of high-quality materials.

ASSEMBLY AND DISASSEMBLY QUICK AND EASY

- The compact construction permits space-saving storage in a cupboard.
- Course boards can be connected to the new Master Unit quickly.
COMPATIBLE WITH ALL COURSE BOARDS

The course board frame acts as an "adapter" for all basic and advanced course boards. The frames can be purchased individually.

INTUITIVE LEARNING, FUNCTIONAL DESIGN

The Master Unit has been designed to allow perfect learning ergometry:
- Complete and easily readable labelling.
- Multi-coloured activity indicators for measuring instruments.
- A luminous strip indicates to the instructor(s) whether a course is being actively carried out.
- All measuring instruments can be controlled directly by the software.

NEW 4-CHANNEL OSCILLOSCOPE

The integrated oscilloscope offers many advantages:
- Four differential inputs
- Measuring rate: 2 M-samples per channel
- Resolution: 12 bits per channel
- Memory depth: 4 K-samples per channel

ACTIVE GUIDANCE

The relevant areas light up during the course of the experiment to guide the user through the experiment.
THE NEW MASTER UNIT

COMPLETELY REVISED
FUNCTIONAL DESIGN

ANTI-THEFT PORT
using a Kensington lock

FOR TABLETS
Interfaces for many available models

FUNCTION GENERATOR
up to 100 KHz
Square-wave, triangular, sinusoidal, DC

8-BIT DIGITAL ANALYSER
2 mm safety sockets

4-CHANNEL OSCILLOSCOPE
with differential inputs

PC interface for controlling course boards (RJ45/USB/WLAN)

Interfaces for many available models
**THE NEW MASTER UNIT COMPLETELY REVISED**

**FUNCTIONAL DESIGN**

**MECHANICAL AND ELECTRICAL SAFETY**

Course board clicks into place

**RASTER SLOT FOR EXPERIMENT BOARDS**

compatible with COM3LAB 1.0

**LUMINOUS STRIP**

as a status indicator

**2 x MULTIMETER**

8 measurement ranges for current, voltage and resistance measurement

**USB PORT**

for external experiments

**One headphone socket on each side**

**Tablet power supply**

**USB PORT**

for external experiments

**Interfaces for many available models**

**PC interface for controlling course boards (RJ45/USB/WLAN)**

**Tablet power supply**

**USB PORT**

for external experiments

**One headphone socket on each side**

**LUMINOUS STRIP**

as a status indicator

**2 x MULTIMETER**

8 measurement ranges for current, voltage and resistance measurement

**MECHANICAL AND ELECTRICAL SAFETY**

Course board clicks into place

**RASTER SLOT FOR EXPERIMENT BOARDS**

compatible with COM3LAB 1.0
Often copied – never equalled. Owing to the clear and consistent preparation of the teaching content, the learning software clearly and unmistakably provides guidance through the individual experiments. Every topic starts with a theoretical introduction followed by at least one topic-related, practical experiment. The COM3LAB self-assessment test ensures that the course content is absorbed and consolidated.

The interactive COM3LAB learning software is suitable for independent learning and experimenting as well as for complete teaching units and project work. The multimedia learning environment supports the real experiments additionally with graphics, animations, videos and optionally with audio.

All courses are available not only in German and in English, but also the courses already support many other languages, such as Spanish, Russian, Polish, etc.
ADVANTAGES

FOR THE TEACHER

- comprehensive content
- practice-oriented experiments
- descriptive teaching materials for presentations
- documentation with solutions
- flexible application for teaching
- time-saving through quick and simple assembly

FOR THE STUDENT

- practice-oriented learning
- review of the results
- documentation of the results
- team work or independent study
- language selection
- adapted to the individual’s learning speed
- promotes decision-making and responsibility

PRACTICE-ORIENTATED EXPERIMENTS INCREASE LEARNING OUTCOMES
SAFETY
TWO STEPS AHEAD

A comprehensive safety concept has been developed for the new COM3LAB.

PROTECTION FROM DESTRUCTION
Apart from the careful choice of materials and a robust design, this aspect includes the protection of the course provided by the new course frameworks.

PROTECTION AGAINST DANGEROUS VOLTAGES
In all COM3LAB courses, only safe voltages and low currents are used. This rules out any hazard. In order to comply additionally with the new regulations in many teaching establishments, the courses can be operated with safety cables.

PROTECTION FROM THEFT
There is a compatible slot for a Kensington lock on the rear side of the Master Unit. In addition, every networkable Master Unit is equipped with a unique ID for easy assessment management.

SO THAT YOU CAN CONCENTRATE ON WHAT’S IMPORTANT
SHORT PREPARATION TIME
ASSEMBLY AND DISASSEMBLY IN ONLY A FEW MINUTES

1. OPEN THE SECURITY LOCK AND PUSH THE MASTER UNIT INTO PLACE
2. CLOSE THE SECURITY LOCK
3. SWITCH ON THE MASTER UNIT
4. START THE SOFTWARE START TRAINING

COURSE DEVICES ARE MECHANICALLY LOCKED AND AUTOMATICALLY ACTIVATED

Introduction to the COM3LAB course
COMPATIBLE WITH ANY LABORATORY EQUIPMENT ...

FOR TABLETS

The slot in the Master Unit is designed to accept many available 8-10" tablets.

Simply establish a connection via WiFi, Ethernet or USB.

An additional charging port at the rear of the Master Unit ensures long-term learning pleasure.

LAPTOP AND PC

For use with laptops and PCs, we recommend Windows 7 or Windows 8.

Now all possibilities are open to you. For better documentation, the course pages can be saved and printed, i.e. as PDF, XPS, ... .

The results of measurements can be further processed in Word and Excel.
What once was good, will be further used. For this reason, the new Master Unit and also the learning software support older course boards.

All that you need is the new course board frame (700 022) which can be bought economically in sets. Click your existing experiment boards into the frames and your equipment is fit for the new learning generation with COM3LAB. The new software supports both the Master Unit 700 00USB and also the new Master Unit 700 020, so that parallel operation is possible.
## COURSES FOR EVERY LEVEL OF EDUCATION

Detailed descriptions of the courses are available in the product section from page 51.

M1.1.3.4 Automation Technology
M1.1.3.6 Drive Technology
The courses DC Technology I + II are the beginner courses in electrical engineering. Step by step, the fundamental terms and laws of electrical engineering are explained and developed with experiments and animations.

**Learning objectives**
- Layout and impact of the basic circuits
- Learning the basic laws of electrical engineering
- Recording characteristic curves of passive components

DC Technology I begins with the explanation of an electric circuit. Using theoretical and practical examples, the functionality of different basic circuits is dealt with.

DC Technology II deals with the mode of operation of passive components. With the automatic recording of characteristic curves, the behaviour of the components becomes clear very quickly.

**Topics**
- Basic circuits
- Basic laws
- Voltage dividers
- Wheatstone bridge
- Characteristic (incandescent lamp, VDR, Diode, NTC, etc.)
- Capacitor
- Inductance
- Batteries

* you will receive further information on the course topics in the product section!
Both courses AC technology I + II deal with the function of alternating currents and voltages.

Learning objectives
- Using function generator and oscilloscope
- Principle and function of a transformer
- Key parameters and fundamentals of the AC circuits

AC I deals with e.g. the generation of an AC voltage or the function of a transformer.
AC II deals with the behaviour of passive components in different circuits. Coil, capacitor and resistor are analysed and evaluated in different circuits.

Topics*
- Step voltage
- Continuous AC voltage
- Electronic generation of AC voltage
- Function generator and oscilloscope
- Induction
- Transformer
- Rectifier
- AC circuit (key parameters, resistor, coil)
- Series circuit (R/L, R/C, R/L/C)
- Parallel circuit (R/L, R/C, R/L/C)
- Capacitor
- Compensation
- Resonance

* you will receive further information on the course topics in the product section!
A wide range of components are required for electrical and electronic circuits. The courses Electronic Components I+II focus on active components, which act intensively or enable control.

### Learning objectives

- Structure, function and use of active components
- Recording the characteristics
- Standard circuits and their areas of use

In the course Electronic Components I the most important diode types are introduced. Outlet and blockage characteristics are recorded and evaluated with the two-channel memory oscilloscope. The npn and pnp transistor is examined in its functions, circuits and characteristics.

In the course Electronic Components II special transistor types and semiconductors in power electronics are used. One of their main uses, the phase controlled modulator, is examined using the example of the thyristor and the triac.

### Topics*

- Characteristics (Z-diode, LED)
- Transistor: structure, function, effect
- Transistor circuits: emitter, collector, basic, Darlington
- structure, function, effect, Characteristics: Field effect transistor
  - MOSFET
  - IGBT
  - DIAC
  - TRIAC

* you will receive further information on the course topics in the product section!

The COM3LAB courses Digital Technology I + II form the foundation for the courses Microcontroller and Telecommunications.

Learning objectives

- Structure, function and effect of the individual logic elements
- Learning important laws of propositional logic
- Use of the TTL components in application circuits

In the course Digital technology I the bases and laws of switch algebra are dealt with using logic links.

In the course Digital Technology I various flip-flop applications, e.g. shift registers, parallel-serial converters or the serial data transmission are dealt with. Both courses deal extensively with troubleshooting.

Topics*

- TTL components (AND, OR, XOR)
- Link of binary inputs
- Basic laws
- Coding
- 7-segment display
- Karnaugh map
- Full-adders
- Multiplexers
- Flip-flop (RS, JK, D)
- Binary mat
- Forward and reverse counter
- BCD counter
- Synchronous counter
- Shift register
- Parallel-serial converter

* you will receive further information on the course topics in the product section!
M1.1.1
FUNDAMENTALS

M1.1.1.5
Operational Amplifier

This course gives you insight into the world of the operational amplifier. From the standard circuit to the implementation of a function generator, all important topic areas are dealt with. This course forms the basis for the courses of control technology.

Learning objectives
• Features and function of operational amplifier
• Use and application of operational amplifier

Topics
• Comparator
• Features of the operational amplifier
• Inverting operational amplifier
• Noninverting operational amplifier
• Fault simulation in the inverting operational amplifier
• Adder
• Integrator
• Differentiator
• Active filters
• Constant voltage source
• Constant current source
• Schmitt trigger
• Astable multivibrator
• Wien bridge oscillator
• Function generator

The COM3LAB course “Three-phase technology” deals with the bases and key parameters of three-phase current. A three-phase generator enables practical experimentation. The differences between a star and a delta circuit are analysed in various tests. Currents, voltages and outputs are measured with symmetrical and unsymmetrical load. An oscilloscope with 8 channels enables phase and line voltages / currents to be shown at the same time.

**Learning objectives**
- Using three-phase current

**Topics**
- Key parameters of three-phase technology
- Star and triangular symmetrical load
- Star and triangular unsymmetrical load
- Power measurement
- Compensation of the phase shift
- Connection of a three-phase motor
- Rotary field measuring instrument

*you will receive further information on the course topics in the product section!
The COM3LAB course “Sensor Technology” teaches the basics of measuring non-electric quantities. With many examples, explanations, exercises and practical tasks, the principles and the function of the sensors and the associated measuring circuits are clearly illustrated.

Learning objectives
- Measuring non-electric quantities
- Function of the sensors

Topics*
- Measuring circuits for measuring temperature
- Effect and characteristics of different temperature sensors: Pt 100, NTC, KTY and thermocouple
- Effect and characteristics of pressure sensors
- Force measurement with strain gauges
- Force measurement with bending bar and torsion bar
- Displacement-, angle- and speed measurement
- Resolver measurements
- Hall sensors
- Ultrasound

* you will receive further information on the course topics in the product section!
In the field of mechatronics signals and information are automatically detected, processed and transformed into force and movement. Everyday life today would be unimaginable without mechatronic products and they are found e.g. in cars, DVD players, air planes etc. The COM3LAB courses Electropneumatics and Automation technology together provide an extensive training package, which covers both the electrical and mechanical topics.

**Learning objectives**
- Learning physical basic principles
- Independent formulation of development projects
- Planning, repair and execution of complete process cycles

The COM3LAB course Electropneumatics teaches the basics of electropneumatics using the BIBB standard tasks. The COM3LAB course Automation technology explains the function and application of a PLC. Several examples make it easy to learn the PLC computer language.

Both courses can be combined so that complete process cycles can be executed and documented. This kind of project work supports independent and creative handling.

**Topics**
- Function and use of electronic and pneumatic components
- Electronic and pneumatic schematics
- Various standard circuits
- Function and use of a PLC
- Programming
- Bus systems

* you will receive further information on the course topics in the product section!
Measure, Actuate and Control (MSR) are terms from the field of automation. The objective is to monitor and run technical processes and production procedures through automatic control systems. Fast-spreading automation today requires profound knowledge of sensors and how to use control loops in many qualified occupations.

The MSR COM3LAB courses take this development into account. They teach applied knowledge of the measurement, actuation and control technology vividly and in detail.

**Learning objectives**
- Measuring non-electric quantities
- Good knowledge in the topics of operational amplifiers and sensor technology
- Good understanding of electronic control loops
- Programming and planning of a PLC

**Topics**
- Operational amplifier
- Control technology
- Sensor technology
- Automation technology

*you will receive further information on the course topics in the product section!
The drive technology is an application which focuses on modern power electronics. Using power electronics, speed-variable DC and three-phase four-quadrant drives can be easily implemented. Nowadays drive technology would not be imaginable without thyristor speed control units, soft-start circuits, frequency converters, servo drives etc. in industry, trade, commercial companies and households.

With the COM3LAB courses on power electronics and drive technology, the specialist knowledge can be gained graphically, both theoretically and practically.

Learning objectives
• Recognizing physical basic principles
• Structure of important base circuits
• Recording machine characteristics
• Introduction to drive technology

Topics*
• Three-phase current
• Characteristics and use of power semiconductors
• Features of commutator - / three-phase machines and stepper motors
• Recording of characteristics of the most important machines

* you will receive further information on the course topics in the product section!
The COM3LAB courses Electrical machines and Three-phase technology lead you through the fascinating world of electrical motors and generators.

Learning objectives
- Recognizing physical basic principles
- Recording of machine characteristics
- Introduction to drive technology

With the COM3LAB course Three-phase technology the special features of multiphase networks are discussed. It forms the basis for understanding rotary field machines like asynchronous and synchronous machines.

Topics*
- Key parameters of the three-phase current
- Base circuits
- Applications

In the COM3LAB course Electrical machines the features of commutator machines, rotary field machines and stepper motors are developed in demanding experiments. Among other things, the course board contains a complete machine test system with which the characteristics of the most important machines are examined.

Topics*
- Machine test system
- DC machines
- Synchronous machines
- Asynchronous machines
- Recording of characteristics
- Speed adjustment

* you will receive further information on the course topics in the product section!
The electrical communications technology mainly deals with information transmission using signals. Without communications technology there would be no internet and no mobile phones today. The communications technology occupations deal with the fields of high frequency technology, transmission technology and wiring technology.

The COM3LAB courses of communications technology teach the knowledge clearly and application-oriented using modulation, the various transmission methods, coding, line links, services, logs etc.

**Learning objectives**
- Learning physical basic principles
- Knowledge of various transmission methods
- Independent application and planning of transmission media

**Topics**
- Conception and the operating characteristics of modern data – and radio stations
- Applications of PCM Codecs in the voice – and signal transmission
- Classic shift keying also QPSK and the procedures MSK and GSMK used in the area of mobile radio
- Fault response of shift keying
- Function and use of two- / four-wire lines, coaxial cables, fibre optic lines etc.

* you will receive further information on the course topics in the product section!
Learning objectives
- Structure of control loops
- Analysis of controlled systems
- Independent evaluation of the measuring results

Liquid control system*
In this project the liquid level measurement is used in order to maintain a pre-selectable filling level height with a control loop. In the process the filling level is controlled by the digital controller of the COM3LAB control technology. The system is very clear and shows the interplay of reference and actual value on closed control loops in didactic form. Filling level and flow can both be examined on one unit.

Temperature controlled system*
The task is to control the precisely defined temperature profiles for the casting metal in its housing, in order to keep it constant. These temperature profiles are set by using the thermally quick temperature control system. The good control dynamics shorten the measuring time. The temperature control system can be actively cooled via the COM3LAB control technology and the control behaviour can be analysed using switchable disturbance variables.

Set of machines*
With the course COM3LAB control technology, the output voltage of the generator is kept constant even when changing the load. The set of machines used here enables a multitude of experiments to be carried out. With the virtual laboratory of COM3LAB, the step response of the system can be recorded, the optimum control parameters identified or time line diagrams of the controlled system recorded.

The equipment includes the COM3LAB Control technology courses and the digital controlled systems Set of machines 10W, digital temperature – and Liquid control system.

The courses COM3LAB control technology offer extensive analysis tools and setting options and enable an optimum parameterization of the controller.

* you will receive further information on the course topics in the product section!
With the COM3LAB Control technology course the speed control of a 300 W shunt wound machine is implemented. The digital controller is configured as a PID controller for this. The key parameters of control systems are measured and the dimensions of closed control loops experimentally illustrated.

Learning objectives

- Structure of control loops
- Analysis of control systems
- Independent evaluation of measuring results

The COM3LAB courses Control technology I + II are multimedia courses with a complete introduction to theory and practice. Experiments are carried out both on electronic control systems and on technical systems (light, speed and temperature control system).

An analog controller and a digital controller are available. Tests on frequency responses, nonlinear control and FUZZY control are also integrated in the continuing course II, an ideal course for a more in-depth introduction to the world of control technology.

**Topics**

- Principles
- Control of technical systems
- Control of electronic systems
- Analog controller
- Digital controller
- FUZZY control

*you will receive further information on the course topics in the product section!
Learning objectives

- Independent implementation of a project
- Programming
- Planning
- Commissioning
- Analysis
- Correction

A universal system simulator has emerged from the connection of the software models and PROFI-CASSY. On one side, the PROFI-CASSY is connected to the PLC of the COM3LAB course Automation technology via the PROFIBUS and on the other side, it is connected to the PC via USB. There are process simulations for the various systems, which are simply installed on the PC as software. The actuators and the sensors of the simulated system are hence accessible for the real external control of the COM3LAB course via PROFI-CASSY.

Topics*

- Motor control
- Traffic light control
- Liquid level control
- Service lift
- Stamping machine

* you will receive further information on the course topics in the product section!

The COM3LAB course Bus and Automation technology teaches the basics of programmable logic controllers (PLC) and shows their interconnection including sensors and actuators using the PROFIBUS. With many examples, explanations, exercises and practical tasks, the basic principles and functions of the PLC and the PROFIBUS are clearly illustrated. The combination with external PROFIBUS components or an external system simulator enables the processes in the bus and automation technology to be illustrated and tracked as accurately as possible and without any great amount of effort.
The equipment includes the COM3LAB courses Electric machines I and Control technology I + II and a shunt wound machine. With these, important experiments can be carried out in the field of electric drives.

In the project work, the speed control of a commercial shunt wound machine was carried out with 300 W. For this reason it is necessary to configure the digital controller of the COM3LAB course Control technology II and to optimise it for the industrial motor.

Learning objectives

- Independent execution of a project
- Configuration of a controller
- Evaluation of the measuring results

With the COM3LAB course Electric machines I the operating performance of electrical machines will first be examined both on physical, mechanical level and by recording speed torque characteristics. Connection technologies of electrical machines, alteration of rotational direction and speed as well as the wiring of the terminal board are the subject of the experiments. With the Control technology course the foundations of speed-controlled drives are examined. The key parameters of control systems are measured and the dimensions of closed control loops illustrated experimentally.

Topics*

- Function of electric machines
- Recording of characteristics
- Function of various controllers
- Speed control of a shunt wound machine

* you will receive further information on the course topics in the product section!

M1.2 AUTOMOTIVE TECHNOLOGY

M1.2.1 FUNDAMENTALS
M1.2.1.1 Electrics
M1.2.1.2 Sensors
M1.2.1.3 Digital Technology

M1.2.2 SPECIALIZATIONS
M1.2.2.1 Bus Systems
Nowadays cars without electronics are hard to imagine. These cars would be not suitable for everyday and everyone's use in modern traffic systems. While only a few devices in the car (windscreen wipers, starter etc.) used to operate electrically, the electrics today perform control functions (engine control, air conditioning, ABS etc.). This fact requires an extensive knowledge in the field of electrics.

The COM3LAB Electrics course has been developed with the automotive industry and therefore enables a solid electrical basic training.

**Learning objectives**

- Learning physical basic principles
- Calculating circuits
- Measuring

In the COM3LAB course Motor vehicle electrics the parameters of voltage, current and resistance are explained in a comprehensible way and additionally considered in the chapter „Calculating with parameters“ using graphic animations and videos. Measurements of real, motor vehicle-relevant components with analog and digital measuring instruments lead to the understanding of simple electrical circuits.

**Topics**

- Voltage, current, resistance
- Ohm's law
- Electrical power
- Electric circuits
- Series and parallel circuits
- Complex circuits
- General measuring instruments
- Analog/digital measuring instruments for measurements of components / vehicle electrical system
Nowadays many things run fully automatically in modern vehicles. The light goes on when it gets dark, the windscreen wiper adapts its wiping speed to the amount of rain. Up to 100 sensors are installed in the vehicle for this reason. They detect physical parameters like temperatures, speeds, angles, pressures etc. and transform these non-electric parameters into electric parameters.

The COM3LAB Motor vehicle sensor system therefore deals with the electric components and sensors in the vehicle.

**Learning objectives**
- Learning physical basic principles
- Getting to know the most important components and sensors

The course “Automotive Sensor Technology” explains the function of the electric components and sensors in a motor vehicle in detail. The course contents are completed by extensive instructions on practical troubleshooting. Comprehension questions and parallel voice output guarantee the greatest possible learning efficiency compared to traditional training methods.

**Topics**
- Lines
- Components
- Sensors
- Batteries and accumulators
- Electric fields
- Capacities
- Generators
- Motors
- Transistors in the motor vehicle

In the COM3LAB course Vehicle-digital memory circuits, flip-flop circuits are introduced. Animations and interactions make the foundations of modern bus systems clear. The topic areas are practical and adapted to the automotive technology in terms of application.

### Topics
- TTL-AND
- TTL-OR
- TTL-NOT
- TTL-XOR
- TTL-NAND
- Logic links
- Coding
- Multiplexer
- Fundamentals CAN Bus

In the COM3LAB Fundamentals Digital and Bus Technology for motor vehicle occupations course, the foundations of the switching algebra are dealt with using logic links. Animations and interactions make the foundations of modern bus systems clear. The topic areas are practical and adapted to the automotive technology in terms of application.

### Topics:
- Flip-flop
- RS flip-flop
- JK Flip-flop
- Shift register
- Counter
- Multivibrators
- Impulse diagram
- Multivibrators
- Impulse diagram
In order to meet ever greater requirements in the vehicle of driving safety, exhaust emission characteristics, fuel consumption and comfort, information is permanently exchanged between the control units and the terminal. In order to process the abundance of information in a timely manner, data buses are used. This requires extensive knowledge of function and use in the vehicle. The COM3LAB Vehicle databuses course takes these requirements into account.

Learning objectives

• Identification and diagnosis of data buses
• Fault analysis

In the COM3LAB Vehicle data buses course the interconnected electronic systems in the automotive technology are comprehensively prepared and taught. Learning the various bus systems and their application areas are emphasized. Here, action-oriented tasks lead to a comprehensive understanding of the connections in the vehicle. Measuring technology as well as troubleshooting and fault correction complete the learning content.

Topics

• Digital technology: Foundations of digital technology
• Bus systems: CAN, LIN, SENT
• Measuring technology: signal sequence, logs, fault analysis
• Connection with external components: Communication and control of external systems (Training card, vehicles) via bus systems
• Other applications and system components
COM3LAB

M1.3 RENEWABLE ENERGY

M1.3.1 FUNDAMENTALS
M1.3.1.1 Photovoltaics
Photovoltaics (PV) is the direct conversion of sunlight into electrical energy through solar cells. Solar collectors today are found in industry and in the private sector, and will also play a significant role in the future.

Learning objectives
- Function and application of a solar collector

The COM3LAB Photovoltaics course is a foundation course on using solar cells. It deals with the structure and the function of solar cells. Using several experiments, the function of solar modules in different conditions is examined. With animations and several illustrations, this course gives a clear introduction to the world of photovoltaic systems.

Topics
- Solar cells (features, function, etc.)
- Solar module (features, function, etc.)
- Circuit types of solar modules
- Solar characteristics
- Influence of temperature
- Influence of shades
- Charging circuit
- Solar charge controller
- Photovoltaics system
- Applications

Inclination angle of the light source

PRODUCT SECTION

IN NUMERICAL ORDER

On the following pages you will find all individual components in numerical order of the catalogue numbers.
INDIVIDUAL COMPONENTS

Connecting lead, 19 A, 25 cm, black
For low-voltage circuits. Copper wires with plugs at both ends and fully insulated axial plug for adding additional leads. Black.

Technical Specifications:
- Plugs and sockets: 4 mm diam.
- Cross-section of conductor: 1 mm²
- Max. continuous current: 19 A
- Length: 25 cm

500 414 Connecting lead, 19 A, 25 cm, black

Connecting lead 19 A, 100 cm, black
For low-voltage circuits. Copper wires with plugs at both ends and fully insulated axial plug for adding additional leads. Black.

Technical Specifications:
- Plugs and sockets: 4 mm diam.
- Cross-section of conductor: 1 mm²
- Max. continuous current: 19 A
- Length: 100 cm

500 444 Connecting lead 19 A, 100 cm, black

Safety bridging plugs, black, set of 10
For use in low-voltage circuits.

Technical Specifications:
- Plugs: safety plugs, 4 mm diam.
- Pin spacing: 19 mm
- Current: 25 A

500 59 Safety bridging plugs, black, set of 10

Safety connecting lead, 10 cm, black
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Black.

Technical Specifications:
- Conductor cross-section: 2.5 mm²
- Steady current: max. 32 A
- Length: 10 cm

500 604 Safety connecting lead, 10 cm, black

Safety connecting lead, 25 cm, yellow/green
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Yellow-green.

Technical Specifications:
- Conductor cross-section: 2.5 mm²
- Steady current: max. 32 A
- Length: 25 cm

500 610 Safety connecting lead, 25 cm, yellow/green
Safety connecting lead, 25 cm, red
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Red.
Technical Specifications:

- Conductor cross-section: 2.5 mm²
- Steady current: max. 32 A
- Length: 25 cm

Safety connecting lead, 25 cm, blue
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Blue.
Technical Specifications:

- Conductor cross-section: 2.5 mm²
- Steady current: max. 32 A
- Length: 25 cm

Safety connecting lead, 25 cm, black
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Black.
Technical Specifications:

- Conductor cross-section: 2.5 mm²
- Steady current: max. 32 A
- Length: 25 cm

Safety connecting lead, 50 cm, yellow/green
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Yellow-green.
Technical Specifications:

- Conductor cross-section: 2.5 mm²
- Steady current: max. 32 A
- Length: 50 cm

Safety connecting lead, 50 cm, red
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Red.
Technical Specifications:

- Conductor cross-section: 2.5 mm²
- Steady current: max. 32 A
- Length: 50 cm

Safety connecting lead, 50 cm, blue
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Blue.
Technical Specifications:

- Conductor cross-section: 2.5 mm²
- Steady current: max. 32 A
- Length: 50 cm
INDIVIDUAL COMPONENTS

Safety connecting lead, 50 cm, black
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Black.

Technical Specifications:
• Conductor cross-section: 2.5 mm²
• Steady current: max. 32 A
• Length: 50 cm

Safety connecting lead, 100 cm, yellow/green
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Yellow-green.

Technical Specifications:
• Conductor cross-section: 2.5 mm²
• Steady current: max. 32 A
• Length: 100 cm

Safety connecting lead, 100 cm, red
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Red.

Technical Specifications:
• Conductor cross-section: 2.5 mm²
• Steady current: max. 32 A
• Length: 100 cm

Safety connecting lead, 100 cm, blue
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Blue.

Technical Specifications:
• Conductor cross-section: 2.5 mm²
• Steady current: max. 32 A max.
• Length: 100 cm

Safety connecting lead, 100 cm, black
For use in low-voltage circuits. Flexible, safety plug with axial safety socket at both ends. Black.

Technical Specifications:
• Conductor cross-section: 2.5 mm²
• Steady current: max. 32 A
• Length: 100 cm
**INDIVIDUAL COMPONENTS**

**Safety connecting leads, 32 A, set of 32**

For use in low-voltage circuits. Flexible PVC strand, safety plugs with axial safety socket at both ends.

Technical Specifications:
- Plugs and sockets: 4 mm diameter (nickel plated)
- Conductor cross-section: 2.5 mm²
- Steady current: max. 32 A
- Contact resistance: 1.8 mΩ

501 461 Connecting leads, 19 A, 100 cm, black, pair

Set of 10 bridging plugs, black

Technical Specifications:
- 4-mm bridging plugs
- 19-mm spacing
- 32 A current

501 511 Set of 10 bridging plugs, black

Bridging plugs with tap, black, set of 10

4-mm bridging plugs with 19 mm spacing with 4-mm tap. Max. current 32 A.

501 512 Bridging plugs with tap, black, set of 10

Profi-CASSY Starter 2

The Profi-CASSY starter package is intended for unlimited experimentation. It consists of a Profi-CASSY module with interface (524 016), plus CASSY Lab 2 software (524 220).

Technical Specifications:
- 16 digital inputs I0 to I15 (5 V or 24 V logic) - Sampling rate: max. 100 values/s
- 16 digital outputs, Q0 to Q15 (5 V or 24 V logic) - Output current: 10 mA with internal 5 V power supply, 500 mA via external power supply of up to 30 V - Total current: 2 A
- The digital inputs/outputs are each equipped with 10-pin plugs for direct connection to automation equipment. Also 8 inputs and 8 outputs are additionally equipped with 2-mm sockets and status LEDs
- 2 analog voltage inputs, A and B
  4-mm safety sockets
  Resolution: 12 bits
  Amplitude: ±10 V
  Measuring error: ±1% plus 0.5% from the end value of range
  Input resistance: 1 MW
  Sampling rate: max. 10,000 values/s
- 2 analog outputs, X and Y
  4-mm safety sockets
  Amplitude: ±10 V
  Output current: max. 100 mA per Output
  Resolution: 12 bits, measuring error: ±1% plus 0.5% from the end value of range
  - Sampling rate: 10,000 values/s
- 1 PROFIBUS connection
  9-pin DSUB socket
  Passive user (slave) on fieldbus PROFIBUS-DP
  Address adjustable via software with 16 digital inputs/outputs
  Transmission rate up to max. 3 Mbits/s
INDIVIDUAL COMPONENTS

- USB port for connection to PC
- 1 CASSY-Bus module or connection to Sensor- or Power-CASSY modules
- Dimensions (WxHxD): 115 mm x 295 mm x 45 mm
- Weight: 1 kg

Scope Of Delivery:
- 1 Profi-CASSY module
- CASSY Lab software with enable code for Windows XP/Vista/7/8 (32+64 bit) and extensive help
- 1 Installation guide
- 1 USB cable
- 1 power adapter 230/12 V/1.6 A
- 1 GSD file for simple parameter settings

Plug-in power supply, 12 V AC
Universal plug-in power supply, e.g. for CASSY, counter S, counter P, electrometer amplifier etc.

Technical Specifications:
- Primary: 230 V AC, 50/60 Hz
- Secondary: 12 V AC, 20 VA
- Connection: coaxial power connector

LIT: Control of Technical Lines I
Detailed representation of experiments to Control of technical Lines (part I), included results for the teacher and Measurements with CASSY Lab 2. DIN A4, in german.

Topics:
- Temperature Control
- Liquid: Flow – Measurement & Control
- Liquid Level: Measurement & Control
- Gas flow control

LIT: Control of technical control loops II, German
Comprehensive instructions for experiments on the closed-loop control of technical control loops (part II), including experiment results for teachers and measurements using CASSY Lab 2. DIN A4 format in German.

Automatic control of physical variables in the frequency range. DIN A4, in German.

LIT: DC Machines (in German) T 10.2.1
93 Illustrations and Diagrams, 130 pages, DIN A4. Language: German.

Topics:
- Experiments with the Shunt Wound Machine
- Experiments with the Series Wound Machine
- Experiments with the Compound Wound Machine
- Experiments with the DC Multifunction Machine
- Experiments with the Universal Motor
- Refresher Questions
INDIVIDUAL COMPONENTS

Storage tray S24-FN

For storage of equipment, especially equipment used in students' experiments. Study construction, made of 4-mm-thick, drawn material with grooves for partitions, can be sub-divided into ten sections.

COM3LAB software

CD containing the software for all available COM3LAB courses in German. For each COM3LAB multimedia course there is an electronic, interactive instruction manual. The contents of the manual are dependent on the topic and are tailored to the hardware. The operation and function of the manuals are identical for all courses. The 32-bit user interface, into which the interactive manual, the virtual lab and the tools are integrated, also remains the same for all courses. Structure of multimedia course software:

- Electronic manual
- Virtual lab (oscilloscope, multimeters, function generator etc.)
- Tools (printers, calculators, word processing, copy function for measurement results)
- Help
- Glossary
- Table of contents

COM3LAB Master Unit

The COM3LAB Master Unit is the multifunctional, compact measuring interface. It is used for the operation and the power supply to the COM3LAB multimedia experiment boards and as an independent measuring laboratory. The Master Unit is connected to the PC via USB Port, WiFi or Ethernet for the recording of measurements and for remote control of its built-in functions. The Master Unit can be quickly assembled and dismantled and easily commissioned. The clear and structured design of the Master Unit makes it easy and self-explanatory to operate.

Characteristics:
- 4-channel oscilloscope
- 2 digital multimeters
- Digital analyser
- Function generator
- Frequency counter
- Integrated USB interface for external measuring instruments
- USB charging socket for tablets
- Light strip and LEDs for status display
- Two separate audio outputs so that two schoolchildren can work with the Master Unit at the same time (suitable for inclusion)

Interfaces:
- Network interface 100 MBit RJ45
- WiFi
- USB
- Security lock for fastening the experimentation boards
- Anti-theft protection (Port for Kensington lock)

Software support:
- Windows 8 / 8.1 32/64 Bit
- Windows 7
- Windows Vista

Integrated measuring instruments and functions:
- **Two digital multimeters:**
  - Voltage: AC / DC / AO + DC 2/20 V
  - Current: AC/DC 0.2/2 A
  - Resistance: 2/20/200 kΩ, 2 MΩ
  - Autoranging for all measurement ranges
- **Digital Function generator:**
  - Digitally generated signal types
  - Sinusoidal, square-wave, triangular, DC
  - 0.5 Hz...100 kHz
  - Max. ±10 V, max. 250 mA
- **Digital 4-channel oscilloscope:**
  - 4 differential inputs
  - Sampling rate: 2 MSamples per channel
  - Resolution: 12 Bit per channel
  - Memory depth: 2 K Samples per channel
- **Digital analyser:**
  - 9 digital inputs, TTL-compatible
  - Sampling frequency: 200 Hz to 2 MHz
  - Triggering on any combination of the input statuses
  - Memory depth 2048 words with 9 Bits

The real measuring instruments can be read out and operated via the software.

Scope of delivery:
- USB cable
- Ethernet cable
- Power supply DC 15V 6A 90W
- Course framework (700 021 - for upgrading existing experimentation boards for operation with the Master Unit 700 020)

Also required:
- 700 022 - 1 set of safety cables (2 mm)
- 689 0600 - 1 set of standard cables (2 mm)
- 700 021 - 1 course framework (700 021 - for upgrading existing experimentation boards for operation with the Master Unit 700 020)
- 700 024 - 10 course frameworks (700 021 - for upgrading existing experimentation boards for operation with the Master Unit 700 020)
### INDIVIDUAL COMPONENTS

#### COM3LAB 1 upgrade carrier standard

The COM3LAB upgrade carrier is used to insert COM3LAB experiment boards, so that they can work with the COM3LAB Master Unit 700 020.

With the new upgrade carrier, the circuit boards are better protected, easier to store and transport.

The packaging of the upgrade carrier is designed as a storage box for board and frame.

| 700 021 | COM3LAB 1 upgrade carrier standard |

#### Safety cable 2 mm

Set of 2 mm safety cables for COM3LAB Courses and the new Master Unit (700 020)

**Scope Of Delivery:**
- 2 x 150 mm red
- 2 x 150 mm blue
- 6 x 150 mm black
- 2 x 300 mm red
- 2 x 300 mm blue
- 2 x 300 mm black

| 700 022 | Safety cable 2 mm |

#### Power supply DC 15V 6A 90W

Power Supply (Desktop Version) for COM3LAB Master Unit 700 020

**Technical Specifications:**
- Input Voltage range: 90 VAC to 264 VAC, 127 VDC to 370 VDC
- No of Outputs: 1
- Output Power: 90 W
- Output Voltage: 15 V
- Output Current: 6 A
- DC-Plug: 2.5 mm Barrel Plug

| 700 023 | Power supply DC 15V 6A 90W |

#### COM3LAB 8 upgrade carriers standard

Set of eight upgrade carriers in order to feature old COM3LAB work boards with the new Master Unit 700 020

| 700 024 | COM3LAB 8 upgrade carriers standard |
COM3LAB course: DC technology I

Course on the fundamentals of direct current technology, consisting of a test board with 13 different circuits. This course introduces the basic concepts and laws of electrical engineering are explained and practically developed.

Topics:
- Circuits with switches
- Switches in series
- Switches in parallel
- Change-over switches
- Polarity reversing circuit
- Relays
- Conductivity
- Ohm's law
- Colour codes and IEC series
- Series-connected resistors
- Kirchhoff's law
- Voltage dividers
- Voltage dividers under load
- Wheatstone bridge

Virtual laboratory:
- Oscilloscope
- Function generator
- Multimeter (2x)
- Digital analyser

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The test board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication.

The experiment board is powered by the Master Unit.

The wiring of the experiments is carried out using a 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

COM3LAB course: DC technology II

Course on the fundamentals of direct current technology, consisting of a test board with 11 different circuits. In this course characteristics can be recorded and the basic types of electrical circuit can be mastered.

Topics:
- Incandescent lamp characteristic
- VDR characteristic
- Diode characteristic
- LDR characteristic
- NTC characteristic
- PTC characteristic
- Capacitors
- Capacitors connected in parallel
- Capacitors connected in series
- RC circuits
- Inductance
- Moving coil instrument
- Batteries
- Two batteries connected in parallel
- Two batteries connected in series

Virtual laboratory:
- Oscilloscope
- Function generator
- Multimeter (2x)
- Digital analyzer

COM3LAB course: AC technology I

Course on the fundamentals of alternating current technology, consisting of a test board with 11 different circuits. This course covers the production of AC voltage, transformers and rectifier circuits.

Topics:
- Step voltage
- Continuous AC voltage
- Electronic generation of AC voltage
- Function generators and oscilloscopes
- Induction
- Principle of transformers
- Short-circuited transformers
- Transformers under load
- Transformer losses
- Diodes used as current valves
- M1 rectifiers
- M2 rectifiers
- B2 rectifiers
- Symmetrical output voltage

Virtual lab:
- Oscilloscope
- Function generator
- Multimeter (2x)
- Digital analyser

Additional functions:

COM3LAB course: AC technology II

Course on the fundamentals of alternating current technology, consisting of a test board with 11 different circuits. This course covers the behaviour of resistance, coil and capacitor in an AC circuit.

Topics:
• Generating alternating voltages
• Key parameters of AC technology
• Ohmic resistance in an AC circuit
• Coils in an AC circuit
• Inductive reactance
• Series RL circuits
• Parallel RL circuits
• Capacitors in an AC circuit
• Capacitive reactance
• Series RC circuits
• Parallel RC circuits
• Series RLC circuits
• Parallel RLC circuits
• Series compensation
• Parallel compensation
• Voltage resonance
• Current resonance

COM3LAB course: Electronic components I

Course on the electronic components, consisting of a test board with 12 various circuits. This course provides the behaviour of diodes and transistors.

Topics:
• Diode characteristics
• Characteristic of a Z diode
• Characteristic of an LED
• Diode branches in a transistor
• Input characteristic of the transistor
• Output characteristics of the transistor
• Control characteristic of the transistor
• Power dissipation of a transistor
• Characteristic of a phototransistor
• Darlington circuit
• Operating point of a transistor
• Transistor in a common emitter circuit
• Transistor in a common collector circuit
• Transistor in a common base circuit
• Transistors in timer circuits

Virtual laboratory:
• Oscilloscope
• Function generator
• Multimeter (2x)
• Digital analyser

INDIVIDUAL COMPONENTS

COM3LAB course: Electronic components II

Course on the electronic components, consisting of a test board with 12 different circuits. This course explains the behaviour of FETs, MOSFETs and IGBTs.

Topics:
- Design of the FET
- Transfer characteristic of the JFET
- Output characteristic family of a JFET
- JFET as a switch
- Characteristics of the MOSFET
- The MOSFET as a switch
- Characteristics of the IGBT
- The IGBT as a switch
- Characteristic of the DIAC
- Characteristic of the thyristor
- Thyristor in the DC circuit
- Phase angle control with a thyristor
- Characteristic of the TRIAC
- Phase angle control with a TRIAC

Virtual lab:
- Oscilloscope
- Function generator
- 2 multimeters
- Digital analyser

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation

COM3LAB course: Digital technology I

Course on the basics of digital technology (circuits), consisting of a test board with various components and logic gates. The course examines the principles and laws in digital technology.

Topics:
- TTL AND gates
- TTL OR gates
- TTL NOT gates (inverters)
- TTL XOR gates
- Boolean operations
- De Morgan's law
- TTL NAND gates
- Associative law
- Distributive law
- Karnaugh maps
- Coding
- Seven-segment displays
- Half-adders
- Full-adders
- Multiplexers/demultiplexers
- Fault simulation

Virtual laboratory:

The experiment board is powered by the Master Unit. The wiring of the experiments carried out over 2 mm cable. Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- 4 x AND, 3 x OR, 2 x XOR, 2 x NOR, 3 x NAND
- Full adder
- 7 Segment display
- Multiplexers, Demultiplexers
- 4 command switches
- 2 sensors, 2 LEDs

Scope Of Delivery:
- Set of cables consisting of 5 connecting leads 30 cm equipped with 2-mm plugs.

INDIVIDUAL COMPONENTS

COM3LAB course: Digital technology II

Course on the basics of digital technology (switching networks), consisting of a test board with various circuits. The course deals with the operation and use of flip-flops.

Topics:
- Flip-flops
- RS flip-flops
- RS flip-flops with clock input
- Monostable and astable multivibrators
- Schmitt triggers
- D flip-flops
- JK flip-flops
- JK master-slave flip-flops
- Frequency dividers
- Counters
- Shift registers
- Parallel-serial converters

Virtual laboratory:
- Oscilloscope
- Function generator
- Multimeter(2x)
- Digital analyser

COM3LAB course: Power electronics I

Course on phase-commutated and self-commutated converter circuits, consisting of an experiment board with various circuits for mounting into the Master Unit and a multimedia CD with interactive training software.

Topics:
Introduction
- Semiconductors in power electronics
- Wiring and triggering
- Switching processes and commutation
- Uncontrolled rectifier circuits
- Parameters for periodic signals
- Controlled line-commutated static converters
- M1 circuit
- M3C-circuit
- B2C circuit
- B6C semi-controlled rectifiers

Virtual lab:
- Oscilloscope
- Function generator
- Multimeter (2x)
- Digital analyser
- Characteristic curve plotter
- Converter analyser
- Converter control unit

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation

The experiment board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication. The experiment board is powered by the Master Unit. The wiring of the experiments carried out over 2 mm cable. Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- 1 three-phase network generator in 50 and 60 Hz
- Self-commutated and line-commutated static converter (E1 to B6 circuit) with TSE protection
- H6-MOSFET frequency converter from 1 to 120 Hz
- Three independent amperemeters
- Three incandescent lamps as ohmic load
- Inductive and capacitive loads
- 4-channel multiplexer

Scope Of Delivery:
- Set of cables consisting of 40 cm and 5 cm long connecting leads with 2-mm plugs

COM3LAB course: Power electronics II

Supplementary course on power inverter, DC choppers, converters and drive technology, consisting of a dongle for the PE I experiment board and a circuit board with the equivalent circuit of a three-phase induction machine including a rotating field indicator.

Topics:
- Self-commutated converters (power inverters)
- Semiconductor switches and controllers (bidirectional static converters)
- Switches and controller for DC
- Converters
- Static converters in automatic control technology
- Static converters in drive technology

Virtual lab:
- Oscilloscope
- Function generator
- Multimeters (2x)
- Digital analyser
- Characteristic curve plotter
- Converter analyser
- Converter control unit

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The 700 22 dongle is inserted on the experiment board 700 21. This will be powered by the Master Unit.

The wiring of the experiments is carried out using 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

Additionally required:
- 700 21 COM3LAB course: Power electronics I

Scope Of Delivery:
- Dongle
- Experiment board: replacement switch Asynchronous machine

COM3LAB course: Three-phase technology

This COM3LAB course investigates the behaviour of three-phase systems. Practical exercises show the generation of the rotary fields or the function of the transformers. Furthermore, passive components in different circuits are discussed. Coils, capacitors and resistors are analysed and evaluated in different circuits. An 8-channel oscilloscope enables the simultaneous measurement of all voltages and currents in the three-phase system.

Topics:
- Characteristics of a three-phase system
- Representation of line diagrams and phase relationships
- Star- and delta circuits with different loads
- Measurement of phase and line voltage/current
- Ohmic load
- Symmetrical and unsymmetrical charges
- Measurement of power in the three-phase system

Virtual lab:
- Spectrum analyser (FFT module)
- Frequency counter
- Multimeters (2x)
- Function generator
- Digital memory oscilloscope
- Multiplexer for recording four voltages and four currents

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The experiment board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication.

The wiring of the experiments carried out over 2 mm cable. Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- Star circuit with resistors
- Delta circuit with resistors
- Capacitors
- Load resistors

Prerequisites: Fundamentals of AC technology
INDIVIDUAL COMPONENTS

COM3LAB course: Electrical machines I

Course concerning the connection methods and the recording of characteristics for electric motors and generators. With the integrated machine test system, a multitude of experiments can be carried out, e.g. the recording of torque, power and current-locus curves.

Topics:
- Forces in a magnetic field
- Measurement of Lorentz force
- Drives
- Torque-speed characteristic
- Machine test system
- DC machines
- Speed and induced voltage with DC machines
- Torque and armature voltage with DC machines
- Torque and excitation voltage with DC machines
- DC machines with external excitation
- Reversible of direction
- Characteristics with variable armature voltage
- Characteristics with variable excitation voltage
- Shunt-wound DC machines
- Characteristics with variable operating voltage
- Series-wound DC machines
- Reversal of direction with DC machines
- Characteristics with variable operating voltage
- Generator operation of DC machines
- Drive and generator with a resistive load
- Power output of generator
- Rotating field (three-phase) machines
- Three-phase windings
- Rotating fields
- Direction of rotation with periodic swapping of phase conductors
- Direction of rotation when phase conductors are swapped
- Voltage and current in star (Y) circuits
- Voltage and current in delta circuits
- Resistance in stator winding
- Reactance of an AC winding
- Synchronous machines
- Equivalent circuit diagram for synchronous machines and how they are used
- Permanently excited synchronous machines
- Step operation of synchronous machines
- Determining rotor position in star configuration
- Determining rotor position in delta configuration
- Synchronous machine at variable speed (run-up)
- Speed measurement
- Speed setting using frequency converter
- Asynchronous machines
- Block and equivalent circuit diagrams for asynchronous machines
- Determination of slip
- Star-delta starting
- Measurement of torque and line currents during run-up
- Changing direction of asynchronous machines
- Recording of torque-speed characteristic for asynchronous machines
- Three-phase drives
- Changing speed of asynchronous machines
- How speed depends on slip
- How speed depends on stator frequency
- Stepper motors
- Full-step operation
- Half-step operation
- Changing the direction of a stepper motor

Virtual lab:
- Multi-channel oscilloscope
- Oscilloscope
- Function generator
- Multimeter (2×)
- Digital analyser

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary
The experiment board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication. The wiring of the experiments carried out over 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- Synchronous machine with optical rotary field indicator and strobe for speed determination
- Induction motor with star-delta switch
- Optical tachogenerator
- DC motor
- DC generator
- Current-torque converter
- Thermometer
- Electronic load
- Three phase generator, phase voltage: 0 V .. 10 V
- Frequency converter, Frequency: 1 Hz - 80 Hz
- DC supplies
- Stepper motor
- Electrodynamic force meter
- Multichannel oscilloscope

Scope Of Delivery:
- Power supply 230/12 VAC
- 700 2501 COMLAB course: Electrical machines I

COM3LAB course: Automation and bus technology

The COM3LAB course automation and bus technology teaches the basic knowledge of programmable logic controller (PLC) and shows its networking including sensors and actuators by means of the PROFIBUS. With many examples, explanations, practices and practical tasks the base and mode of operation of the PLC and PROFIBUS are vividly represented.

It consists of an experiment board with various circuits for mounting into the Master Unit and a Multimedia CD with interactive training software.

Topics:
- Basics and basic terms (IEC 1131) of the PLC
- Logic connections, times, counters, data processing and program editing
- Simple sensors and signal conditioning with analogue digital transformers and multiplexers
- Proving of an automation system
- Programming and initialization of the PLC
- Data transfer structures and protocols
- Transfer and error analysis
- Connection of external components
- Link of PROFIBUS users (GSD)

Virtual lab:
- Oscilloscope
- Function generator
- Multimeter (2x)
- PROFIBUS analyser
- PLC Control
- PLC Program
- Process In/Out

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The experiment board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication.

The wiring of the experiments carried out over 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- 24 digital inputs
- 8 analog inputs
- Sensors: Temperature sensor, Photo transistor
- 20 digital outputs
- 2 analog outputs
- 1 Motor
- Dimmable incandescent lamp
- 4 mm sockets for external application
- Connection for external Profibus components
- PROFIBUS (1 Master, 2 Slaves)

COM3LAB course: Electropneumatics

The COM3LAB course electro pneumatics is designed to teach basic knowledge of pneumatics and electro pneumatics. By means of examples, explanations, exercises and the complete range of BIBB standard tasks the basics and the „how-to” of pneumatics and electro pneumatics are vividly illustrated.

In order to perform experiments the COM3LAB board can either be connected with industry standard valve technology or with the additionally available COM3LAB board pneumatics (700 351), which is equipped with complete hardware to perform all BIBB standard tasks.

Topics:
• Basics of pneumatics/electro pneumatics
• Pneumatic and electric circuit diagrams
• Pilot control of a single-acting cylinder
• Pilot control of a double-acting cylinder
• Holding element control
• Basic circuit with AND function
• Basic circuit with OR function
• Basic circuit with electric latching circuits
• Displacement-dependent control
• Time-dependent control, switch-on and switch-off time delay
• Pressure-dependent control
• Sequential controls

Virtual lab:
• Oscilloscope
• Function generator
• Multimeters (2x)
• Digital analyser

Additional functions:
• Word processing
• Printer
• Pocket calculator
• Free experimentation
• Glossary

The experiment board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication. The experiment board is powered by the Master Unit. The wiring of the experiments carried out over 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
• 6 relays, 4 changeover contacts
• 1 time relay (switch-on and switch-off time delay)
• 1 Pressure transducer
• 1 Pressure sensor 0 .. 10 bar
• Operating and monitoring elements
• 24 V voltage supply

COM3LAB course: Pneumatics Board

Addition to the COM3LAB course electropneumatics. The COM3Lab pneumatics board is equipped with the complete hardware to perform all BIBB standard tasks. It will be connected directly to the COM3LAB course electropneumatics that will monitor the components with the integrated displacement sensors of the cylinders.

Additionally required:
- 700 35 COM3LAB electropneumatics course
- Compressor with the following minimum requirements:
  - Connection power: 15 W
  - Pressure: 500 kPa
  - Feed rate: 2 l/min
- The quiet compressor Cat. no. 744 600 is recommended.

Technical Specifications:
- 1 x single-acting cylinder, spring return with capacitive end switch
- 3 x double-acting cylinder with displacement sensor and cylinder switch
- 4 x throttle valves
- 3 x S/2 electric displacement impulse valves
- 3 x S/2 electric displacement valves with spring return
- 1 x central switch-on valve for pressure supply, controlled by COM3LAB
- 3 x displacement sensor for double-acting cylinders

Scope Of Delivery:
- 1 x PU Plastic hose 5m long and 2.5 mm thick
- 6 x adapter cables 2 mm on socket connectors
- 20 x blanking elements
- 10 x 2 mm cables in blue, 4 cm long
- 20 x 2 mm cables in blue, 15 cm long
- 12 x 2 mm cables in red/black, different lengths
- 1 x screwdriver

COM3LAB course: Photovoltaic

Photovoltaic bases
The COM3LAB course 700 53 photovoltaic treats the structure and the function of solar cells. Animations and illustrations give a descriptive introduction into photovoltaic systems. On basis of real experiments, the course describes the functioning of solar modules. The microcontrolled charge controller pursues the solar generator in the Maximum Power Point (MPP). Theory and experiments are accompanied and checked by the photovoltaic interactive training program.

Topics:
- Solar cell (Properties, function, etc)
- Solar module (Properties, function, etc)
- Different circuits of solar modules
- Solar characteristic
- Influence of temperature
- Influence of shadow
- Charge controller
- Solar charger controller
- Photovoltaic systems
- Applications

Virtual lab:
- Oscilloscope
- Function generator
- Multimeter (2x)
- Digital analyser

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The experiment board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication.

The experiment board is powered by the Master Unit.

The wiring of the experiments carried out over 2 mm cable.
Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- 1 x Halogen lamp 230 V /100 W with holder and dimmer
- 4 x Solar cells 4 V / 35 mA
- 1 x Solar charger 2.4 V / 60 mAh
- 1 x Solar controller with microcontroller
- 1 x Solar controller with IC
- 1 x Temperature sensor
- 1 x Fan 12 V
- 1 x Step-up converter
- 1 x Frequency converter
- 2 x Current/Voltage converter
- 1 x Motor
- 1 x LED 12 V
- 2 x Storage capacitors
- 1 x Ohmic load

COM3LAB course: Automotive technology I

This COM3LAB course prepares and teaches the basics of automotive electrics/electronics in a comprehensible manner. Physical, chemical and mathematical properties of „Electricity“ lead to a comprehensive understanding of the electrical processes and events in vehicles. Measuring technology, troubleshooting and fault correction complete the learning content.

Topics:
- Electricity in the vehicle: current - voltage - resistance
- Calculating with parameters: Ohm’s law - Power
- Circuits
- Series and parallel circuits - forward slope resistances

Virtual lab:
- Oscilloscope
- Function generator
- Multimeter (2x)
- Digital analyser

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The experiment board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication. On the back of the course frame the unit is plugged into the power supply.

The wiring of the experiments carried out over 2 mm cable. Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- Circuit and relay
- Analog multimeter
- Resistances
- Solar cell
- Diodes
- On-board electrical system and lighting

Scope Of Delivery:
- 1 x Wire wrap panel
- 1 x Chrome nickel wire (d=0.2 mm/d=3m)
- 1 x Constantan wire (d=0.2 mm/l=3m)
- 1 x Iron wire (d=0.2 mm/l=3m)
- 2 x Adapter cables (2 to 4 mm)
- 1 x set of connecting cables (2 mm)

COM3LAB Vehicle Sensors

This CBT course prepares and teaches advanced principles of automotive electrics/electronics in a comprehensible manner. The physical, chemical and mathematical properties of „Electricity“ lead to a comprehensive understanding of the electrical processes and events in vehicles. Measuring technology, troubleshooting and fault correction complete the learning content.

Topics:
- Components: switches, resistors, capacitors, diodes and Zener diodes, relays.
- Schematics: reading vehicle schematics
- Sensors: inductive sensors, magnetic-field sensors.
- Batteries and accumulators: Interconnecting cells, accumulator types.
- Ignition: capacitors, relays, induction, ignition coil.
- Generators and motors: rectification, three-phase generator, permanent magnet generator.
- Transistors in the vehicle: transistor, checking transistors,
- Monitoring features in vehicles, amplifier circuits, application circuits.

Virtual lab:
- Oscilloscope
- Function generator
- Multimeter (2x)
- Digital analyser

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The experiment board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication.

The experiment board is powered by the Master Unit.

The wiring of the experiments carried out over 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- Components: diodes, coil,
- Capacitor, circuit, transistor
- Adjustable fan, rev counter
- Transistor circuits
- Bridge rectifier circuit
- Motor / Generator

COM3LAB course: Automotive Data Buses

In this CBT course, the interconnected electronic systems in automotive technology are comprehensively prepared and taught. At the forefront of this is getting to know the various bus systems and their application areas. Here, action-oriented tasks lead to a comprehensive understanding of the connections in the vehicle. Measuring technology as well as troubleshooting and fault correction complete the learning content.

In conjunction with the CAN databus adapter USB, 739 581USB and the LIN bus PC interface USB, 739 588 the following topics can be covered:

- Digital technology: Basics of the digital technology
- Bus systems: CAN, LIN, SENT
- Measuring technology: physical signals, protocols, fault analysis
- Connection with external components feasible
- Other applications and system components

The experiment board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication. The experiment board is powered by the Master Unit. The wiring of the experiments carried out over 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

COM3LAB course: Vehicle fundamentals Digital and Bus Technology

of switch algebra are dealt with using logic links. Animations and interactions make the fundamentals of modern bus systems clear. The topic areas are practical and adapted to the automotive technology in terms of application.

Topics:
- TTL-AND
- TTL-OR
- TTL-NOT
- TTL-XOR
- TTL-NAND
- Boolean operations
- Coding
- Multiplexer
- Fundamentals CAN Bus

Virtual lab:
- Oscilloscope
- Function generator
- 2 Multimeters
- Digital analyzer

Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- 4 x AND, 3 x OR, 2 x XOR, 2 x NOR, 3 x NAND
- Full adder
- 7-segment display
- Multiplexer, Demultiplexer
- 4 command switch
- 2 sensors, 2 LEDs

Scope Of Delivery:
- Cable set consisting of 5, 30 cm connecting cables with 2 mm plugs.

COM3LAB course: Transmission Technology TX433

Course on the fundamentals and applications of radio transmission technology and analog modulation technology, consisting of an experiment board with various circuits for mounting into the multimedia basic unit and a Multimedia CD with an interactive training software.

Topics:
- Introduction;
- Measuring techniques, spectrum and network analysis;
- Design of transmitters;
- Beats;
- Double sideband AM;
- Single sideband AM;
- Frequency modulation;
- Stereophones and RDS;
- Coding; shift-keying ASK, FSK, PSK;
- Matching;
- The transmitting antenna, SWR measurements;
- Digital data;
- Fault simulation

In conjunction with an additional Master Unit and the receiving technology course the following experiments can also be performed:
- Signal transmission;
  - transmission of alpha-numeric data;
  - telematics;
  - telemetry;
  - cryptography

Virtual lab:
- Oscilloscope
- Function generator
- 2 Multimeters
- Digital analyser
- Spectrum analyser (FFT-module)
- Network analyser with Bode module
- SWR meter
- Frequency counter
- Data transfer module

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The test board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication.

The experiment board is powered by the Master Unit. The wiring of the experiments is carried out using a 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

Note
Runs under Windows 2000/XP/Vista/7/8 (32 Bit only)

Technical Specifications:
- Signal generator, Summing output stage
- Carrier oscillator, Product modulator (AM), ESB filter
- Matching element
- Stereo / Mono converter
- VCO with pre-emphasis (FM)
- Stereocoder, RDS coder
- FM transmitter in Hybrid module technology (SMD)
  - Transmission frequency: 433,75 MHz, approval-free ISM frequency
  - Power: 10 mW
- Frequency hub: adjustable, max. 75 kHz
- Telescopic aerial, Directional coupler
- Evaluation electronics (SWR)
- Calibration element: 50 Ω BNC

Scope Of Delivery:
- Telescopic w with BNC socket
- BNC end-plug 50 Ohm

Additionally required:

INDIVIDUAL COMPONENTS

COM3LAB course: Reception Technology RX433

Expansion course to 700 71 COM3LAB course TX433 Transmitting Technology. This course contains the fundamentals and applications of radio receiving technology and analogue demodulation technology. The experiments are performed with the board of the transmitter and the receiver. The course consists of an experiment board with various circuits for mounting into the Master Unit.

Topics:
- Receiver concepts
- Measurement techniques
- Sound equalizing
- Radio receiver
- Applications of RDS, service features and information types
- Stereo reproduction
- Synchronous demodulation
- Envelope curve demodulation
- PLL
- De-emphasis
- Encoding
- Data security
- Fault simulation

In conjunction with an additional Master Unit and the transmission technology course the following experiments can also be performed:
- Demodulation of AM and FM signals
- How squelch works
- Signal transmission
- Transmission of alphanumeric data
- Telematics, telemetry, cryptography

Virtual Lab:
- Oscilloscope
- Function generator
- 2 Multimeters
- Digital analyzer
- Spectrum analyser (FFT-module)
- Network analyser with Bode module
- Data transfer module

Additional functions:
- Word processing
- Printer
- Pocket calculator

The test board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication. The experiment board is powered by the Master Unit. The wiring of the experiments is carried out using a 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

Note
Runs under Windows 2000/XP/Vista/7/8 (32 Bit only)

Technical Specifications:
- FM tuner 88...108 MHz with RDS function
- Stereo decoder
- Superhet in hybrid module technology (SMD)
- Reception frequency: 433,75 MHz, approval-free ISM frequency
- Audio bandwidth: 20 kHz
- Synchronous demodulator
- Band filter for carrier regeneration
- Variable phase shifter
- Envelope demodulator
- Demodulator low-pass
- PLL, De-emphasis
- Audio stage with sound corrector
- Output stage with loudspeaker
- Data processing unit
- Telescopic aerial

COM3LAB course: Digital Communication Technology

The COM3LAB course: Digital Communication Technology discusses all topics of digital signal processing. Additionally attention is paid to the realisation and function of fibre optic transmission systems. Emphasis is laid upon the applications of PCM technology, e.g.: Transmission of voice and signals with real telephones, sound cards, CD-players etc. .

Topics:
- Characteristics of pulse carriers
- Generation of PAM
- PAM (natural)
- PAM (S&H)
- PAM spectrum
- Over sampling / under sampling
- Aliasing
- Shannon theorem
- Pulse code modulation (PCM)
- Quantisation linear and nonlinear
- Compression / expanding
- Code errors
- Time division multiplexing (TDM)
- Synchronisation
- Quantisation noise
- Difference pulse code modulation (DPCM)
- Optical signal transmission
- Signal transmission by wire (coaxial line / two-wire line)
- Simplex / duplex communication

Options
- Transmission of voice (requires external signals, CD player, telephones etc.)
- Influence of the trigger and type of quantisation on the speech intelligibility
- Duplex communication (requires 2 x COM3LAB Course PCM technology, as well as external signal sources)

Virtual Lab:
- Oscilloscope
- Function generator
- 2 Multimeters
- Digital analyser
- Spectrum analyser (FFT-module)
- Frequency counter

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The test board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication.

The experiment board is powered by the Master Unit. The wiring of the experiments is carried out using a 2 mm cable.

Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- 2 x PAM Modulator
- 2 x PCM Modulator
- Clock-pulse generator
- 2 x PAM Demodulator
- 2 x PCM Demodulator
- Signal source Sinus, 1 kHz
- Signal source Sinus, 2 kHz
- RJ-12 socket with hybrid termination circuit
- Jack bush for connecting external signal sources
- Jack bush for connecting external active speakers
- Optical transmitter
- Optical receiver
- Fibre-optic cable with plugs, 3 m

Scope Of Delivery:
- 1 x Audio connection cable (jack bush 3.5 mm)
- 1 x fibre-optic cable (3 m)

INDIVIDUAL COMPONENTS

COM3LAB course: Modem Technology
Course on the fundamentals and applications of shift keyed signals and modems, consisting of an experiment board with various circuits for mounting into the Master Unit.

Topics:
• Introduction
• Amplitude shift keying (ASK)
• Frequency shift keying
• 2-Phase shift keying (2PSK)
• 4-Phase shift keying (4PSK)
• Difference phase coding
• Shift keyed signals in the time domain
• Shift keyed signals in the frequency domain
• Estimation of the bandwidth
• Modulation rate / data rate
• SNR and bandwidth
• Hardware of the modulators
• Hardware of the demodulators
• Carrier recovery and synchronisation of the demodulators
• Error correction
• Error detection
• Operational modes: simplex half duplex, full duplex
• NRZ Line code
• Fault simulation

Options:
• Communication of 2 PCs using modems
  A 2nd workstation with a PC with Master Unit and modem technology course (700 7401) is necessary, as well as other accessories (coaxial cable, star quad cable etc.)

Virtual Lab:
• Oscilloscope
• Function generator
• 2 Multimeters
• Digital analyser
• Spectrum analyser (FFT-module)
• Frequency counter
• Data transfer module

Additional functions:
• Word processing
• Printer
• Pocket calculator
• Free experimentation
• Glossary

The test board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication. The experiment board is powered by the Master Unit. The wiring of the experiments is carried out using a 2 mm cable. Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
• Data source for baseband signal
• ASK Modulator
• FSK Modulator
• 2PSK Modulator
• 4PSK Modulator
• Carrier generator
• Modulation multiplexer
• Audio stage with piezo loudspeaker
• Channel level adapter
• Signal detector
• ASK demodulator
• FSK demodulator
• 2PSK demodulator
• 4PSK demodulator
• Carrier recovery

COM3LAB course: Telecommunication Lines

Course on the fundamentals and applications of various telecommunication line types.

Topics:
- Frequency responses of two-wire lines
- Determination of the characteristic wave impedance
- Measurement of near and far-end crosstalk
- Impulse behaviour of coaxial lines
- Mismatching
- Hybrid and phantom circuit
- Duplex transmission and remote supply
- Characteristic curves of LEDs in the optical communications engineering
- Attenuation at fibre optic lines
- Measurement of the optical power
- Coupling losses
- Bending losses

Virtual Lab:
- Oscilloscope
- Function generator
- 2 Multimeters
- Digital analyser
- FFT Spectrum analyser
- Frequency counter
- Bode module

Additional functions:

Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- Equivalent circuits of two-wire lines
- Equivalent line of four-wire lines
- Star quad with phantom circuit
- Hybrid termination circuit
- Pulse generator
- Module for echo pulse evaluation
- Optical transmitter
- Optical level meter
- Shift unit for longitudinal offset on fibre-optic cable
- Signal sources 1 kHz / 2 kHz

Scope Of Delivery:
- 1 x coaxial cable, 50 m of RG 58 manufactures with BNC plug / plug
- 1 x fibre optic cable, 2 m
- 1 x fibre optic cable, 20 m

COM3LAB course: Operational amplifier

Course on operational amplifier circuits, consisting of an experiment board with various circuits for mounting into the Master Unit.

Topics:
- The comparator
- Features of the operational amplifier
- Inverting op amp
- Noninverting op amp
- Fault simulation in inverting op amps
- Adder
- Integrator
- Differentiator
- Active filters
- Stabilised voltage source
- Stabilised current source
- Schmitt trigger
- Astable multivibrator
- Wien bridge oscillator
- Function generator

Virtual Lab:
- Oscilloscope
- Function generator
- 2 Multimeters
- Digital analyser
- FFT Spectrum analyser
- Frequency counter
- Bode module

COM3LAB course: Control technology I

Course on the fundamentals of automatic control technology, consisting of an experiment board with various circuits for mounting into the Master Unit and a Multimedia CD with an interactive training program.

Topics:
• Introduction
• Open-loop control
• Closed-loop control
• Analysis of controlled systems
• Controlled systems with/without compensation
• Controlled systems of a higher order
• Types of controllers
• P, I, PI, PID and PD control
• Automatic digital control
• Performance criteria for automatic controls
• Optimization guidelines for PID controllers
• Automatic temperature control
• Automatic speed control
• Automatic light control
• Automatic control of systems without compensation
• Automatic control with discontinuous controllers
• Fault simulation

Virtual lab:
• Oscilloscope
• Function generator
• 2 Multimeters
• Digital analyser
• Static characteristic plotter
• Step response plotter
• DDC plotter
• Controller design calculator (for optimum controller parameters)

Additional functions:
• Word processing
• Printer
• Pocket calculator
• Free experimentation
• Glossary

The experiment board is powered by the Master Unit. The wiring of the experiments carried out over 2 mm cable. Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
• Analog controller
• Summation points with disturbance inputs
• Digital controller
• Lag element
• DC signal sources 1V, 5V, 10V
• P-action element
• PT-1 elements (2 x)
• I-action element, resettable
• Nonlinear characteristic element
• Speed controlled system with optical speed sensor
• Temperature controlled system with KTY-temperature sensor
• Light controlled system with photodiode sensor and external light source (disturbance source)

COM3LAB course: Control technology II

Supplementary course on the fundamentals of control technology including a dongle for the CTI experiment board.

Topics:
- Introduction
- Stability of automatic control systems
- Controller design using the Ziegler/Nichols method
- Systems with lag time
- Limiting the manipulated variable
- Cascade control
- Introduction to frequency response
- Frequency response of single basic elements
- Frequency response of combined elements
- Controller design in the frequency domain
- Fuzzy control
- Adaptive control
- Experiments with external controlled systems

Virtual lab:
- Oscilloscope
- Function generator
- 1 Multimeter
- Digital Analyser
- Static characteristic plotter
- Step response plotter
- DDC plotter
- Controller design calculator (for optimum controller parameters)

Additional Functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The 700 83 dongle is pushed onto the experiment board 700 82. This is powered by the Master Unit.
The wiring of the experiments carried out over 2 mm cable.
Course content, experiment instructions and tasks are taught through a course-specific software.

- Operating system: Windows XP/Vista/7/8
- Support for unguided, free experimentation.
- Additionally required: 700 82 COM3LAB course, Control Technology I
COM3LAB course: Sensor technology

This COM3LAB sensor system course (700 84) teaches the basics of the measurements of non-electric quantities. With many examples, explanations and practical tasks, the function and operation of sensors and measuring circuits are investigated.

Topics:
- Electronic circuits for temperature measurement
- Function and characteristics of different temperature sensors: Pt100, NTC, KTY and thermocouple.
- Force measurements with strain gauges.
- Force measurement with bending bar.
- Displacement-, angle- and speed measurement.
- Measurements with optical encoder.
- Hall sensors.

Virtual lab:
- Frequency counter
- 2 digital multimeters
- Function generator
- Digital memory oscilloscope

Additional functions:
- Word processing
- Printer
- Pocket calculator
- Free experimentation
- Glossary

The test board is located in a stable course frame. The Master Unit is pushed onto the course frame and connected to the board. The security lock ensures safe communication. The experiment board is powered by the Master Unit. The wiring of the experiments is carried out using a 2 mm cable. Course content, experiment instructions and tasks are taught through a course-specific software.

Technical Specifications:
- Torque measurement using strain gauges on beams
- Temperature sensors: Pt 100, NTC, KTY, Thermocouple element
- Peltier element for recording the temperature characteristics of approx. 0° to 50°
- Differential pressure sensor
- Ohmic displacement transducer
- Capacitive displacement transducer
- Inductive displacement transducer
- Positioning using hall sensor and Reed contact
- Ultrasonic sensor with receiver
- Brightness measurement using photo diode
- Hall sensor
- Optical sensor
- Adjustable current source
- Measuring procedure with compensated lines: three-wire measurement, four-wire measurement
- 1 universal measurement amplifier
- 1 pressure sensor with pressure display
- 1 force gauge

Scope Of Delivery:
- 1 x 50 ml nozzle
- 1 x pressure gauge 1 – 1.5 bar
- 1 x hose, 6 cm long
- 1 x hose connector
- 1 x compressive force gauge, 3 bar
- 1 x compression member

Additionally required:

Electina

ELECTINA (without PCB) is a powerful and flexible training, exercise and development package to design analogue and digital electronic circuits. Circuit diagrams are created using an easy-to-use design editor. The circuit simulations and circuit analyses, virtual or real time measurements as well as mistake search can easily be carried out with the quickly learnable tools of Electina.

Plain DTP tools as well as efficient text editors and equation editors help in the production of professional teaching materials, reports and presentations.

Electina contains efficient tools to control learning with pupils, to supervise the learning success and to know the technologies in the mistake search. Above the USB interface circuits on COM3LAB Protoboard can be analysed and evaluated by Electina. Version 8.

Properties

• Simply serveable circuit draught editor
• 3D view
• Editor to the easy construction of switch symbols and components from self-sketched or imported Spice Subcircuits
• Extensive libraries with Spice to models and more than 20,000 components
• More than 20 different analysis possibilities
• Measuring instruments for the simulation and real time measurement
• Digital multimeter
• Functional generator
• Memory oscilloscope
• XY recorder
• Signal analysers
• Digital signal generator
• Logic analyser
• Bode / Nyquist diagrams
• Results of analysis
• Pol-/zero places calculation
• Errors simulation
• Test board active 3D

COM3LAB Protoboard II

Protoboard II expands the COM3LAB Master Unit into a development platform for electronic circuits. Any type of circuit with electronic components (not included) can be set up and tested on the breadboard with 1-mm contacts.

The fixed voltage outputs and the function generator output are connected via 2-mm sockets and can be switched using slide switches. There are 2 change-over switches for any desired connections located on the prototyping board. Furthermore, standard European printed circuit boards can be connected using a 64-pin VG terminal strip. 8 relay switchover contacts are located on the VG terminal strip. 8 digital outputs can be tapped using the VG strip or via 2-mm sockets. The relay and digital outputs can be switched using software.

The power supply, the multimeter and the function generator of the Master Unit can be operated without the PC.

Scope Of Delivery:

- Software for the display of the integrated measuring instruments (multimeter, function generator, memory oscilloscope, logic analyser, frequency counter) under Windows
- 2 European grid matrix printed circuit boards with VG plug for soldering exercises and for the assembly of special circuits
- 50 wire jumpers, 1 mm, for interconnecting the components
- 20 adapter leads, 1 mm/2 mm for the connection of the measuring points to the inputs of the measuring instruments
- 5 probe tips with 2-mm terminal socket

700 9101 COM3LAB Protoboard II

INDIVIDUAL COMPONENTS

Panel frame L180, ONE LEVEL
- 1-level frame for training panels in DIN A4 equivalent height
- 2 aluminum profile rails with 2 brush strips
- 2 L-bases of rectangular steel tubing
- mounted to bench top with 2 M8 wing screws

Technical Specifications:
- Height: 175.0 cm
- Width: 394 cm
- Depth: 150 cm

Panel frame SL85, single-level
- Single-level frame for training panels of DIN A4 height, design with approx. 30° angle
- Two aluminium profile rails with 2 brush strips
- 2 L-shaped bases made of rectangular steel tubing

Technical Specifications:
- Table fastening with 2 M8 wing screws
- Width: 895 mm, Height: 380 mm, Depth: 250 mm

Stabilised power supply ±15 V/3 A
Laboratory power supply with two separate and stabilised fixed voltages for vertical assembly in panel frames or demonstration experiment frames using the plug-in system. Short-circuit-proof. Rated-voltage monitoring via two green LEDs.

Technical Specifications:
- Output voltage: ±15 V via 4-mm sockets
- Maximum load capacity: 2.4 A, short-term 3 A
- Connection voltage: 230 V, 50/60 Hz
- Fuse: T 1.0
- Power consumption: 160 VA
- Dimensions: 100 mm x 297 mm x 120 mm
- Weight: 5 kg

Software: 5 Models CBS 9 (single user)
Simulation that runs on the PC and contains the simulation of 5 different processes. Using a PROFI-CASSY Interface (524 016) this simulation can be controlled by a real PLC or the COM3LAB Course "Automation and Bus technology".

This package contains a Single user license with the following models:
- Motor control
- Traffic light control
- Liquid level control
- Service lift
- Stamping machine

Software: 5 Models CBS 9 (single user)
Available in German or Spanish
Software: 5 Models CBS 9 (licence for 25 places)

Simulation that runs on the PC and contains the simulation of 5 different processes. Using a PROFI-CASSY Interface (524 016) this simulation can be controlled by a real PLC or the Com3Lab Course “Automation and Bus technology”.

This package contains a class room license (25 users) with the same models as the Software for the single user

Available in German or Spanish

Profibus cable

- Standard Profibus cable, 2 wires, isolated
- Special design for quick mounting

| 730 4312 | Profibus cable |

Bus connecting plug RS 485

- Connecting plug for Profibus until 12 MBIT/s 180° cable angle
- Terminating resistor with separating function, without PG plug

| 730 4313 | Bus connecting plug RS 485 |

Coupling 0.3

Rubber coupling sleeve for mechanical connection of two electrical machines of the 0.1 kW or 0.3 kW series.

| 731 06 | Coupling 0.3 |

Coupling and shaft end guard 0.3 transparent

Attachable guard for protection against contact with electrical machine rotating parts of the 0.1 kW or 0.3 kW series.

| 773 108 | Coupling and shaft end guard 0.3 transparent |

Tacho generator 0.3

For registering the speed of electrical machines in the 0.1 kW and 0.3 kW series.

Technical Specifications:

- Output voltage: ±1 V/1000 rpm

| 773 109 | Tacho generator 0.3 |
Shunt wound machine 0.3

DC shunt wound machine for motor and generator operation. All windings are separately connected to 4 mm safety sockets.

Technical Specifications:
- Class: 0.3
- Power: 0.3 kW
- Voltage: 220 V
- Current: 1.8 A
- Excitation voltage: 220 V
- Excitation current: 0.25 A
- Speed: 2000 rpm
- International protection code: IP 20
- Insulation system: B/F

Set of machines 10 W

The set of 10 W machines is a technical controlled system for experiments on speed and voltage control. It consists of an electrical drive including digital speed sensing, a generator machine and an electronic load. Using the adjustable load, real generator operation can be investigated. The machine set makes it possible to measure the load characteristic of the generator and the dynamic behaviour of systems of higher order. A microprocessor controlled power module supplies the drive machine. Thus no external power amplifier is required. The set of machines comes with 7-segment displays for the measurement of speed and torque.

Technical Specifications:
- Speed: 3000 rpm max.
- Control voltage: ±10 V
- Tachogenerator: ±10 V
- Switchable prefilter, time constant T = 800 ms
- Power consumption: 10 W max.
- Generator efficiency: 40%
- Supply voltage: ± 15 V DC

Temperature Control System

For the investigation of continuous and discontinuous control loops. Unipolar heat source (max. 20 W for 20 V) with temperature sensor, thermal protection switch, ventilator motor and „throttle flap“, built into a transparent air channel.

Controlled system output signal (controlled variable) switchable 2 mA/10 °C or 1 V/10 °C as desired.

Two possibilities for controlled system disturbance:
- via ventilator motor, internally with speed setter 1...10 or from an external signal source max. 20 V
- via „throttle flap“, position 0 (closed) up to position 4 (open)

Controlled system data:
- Temperature: max. 100 °C
- Delay time T_d: approx. 10 s
- Compensation time T_e: approx. 120 s
- Supply voltage: ± 15 V DC
Gain and offset adjust

For the adjustment and matching of external signals to the normal voltage used in automatic control systems.

Technical Specifications:
- Input voltage range: -50 V to +50 V
- Level matching via adjustable gain: 0...1, 0...10, 0...100
- Smoothing of pulsating signals:
  Time constants: 0.1...10 ms, 10...100 ms
- Offset voltage, switchable: -10 V to +10 V
- Coarse setting via rotary switch
- Fine setting via potentiometer
- Supply voltage: ±15 V DC

Actuator, 115...230 V/1 kW

For the connection of mains-operated DC motors 0.1 kW to 1.0 kW. Electrical isolation between the control and the load side.

Technical Specifications:
- Signal voltage range (manipulated variable): 0...+10 V
- Output voltage of the thyristor half-bridge: 
  \( V_{\text{out}} \) with a max. load of 1.0 kW
- Built-in automatic circuit-breaker (T 10 A) triggered thermally and for overcurrent
- Output voltage for excitation: \( V_{\text{exc}} = f(V_{\text{mains}}) \), max. 10 A
- Outputs: 4-mm safety sockets
- Mains connection for thyristor half-bridge: 115...230 V, 48...62 Hz
- Supply voltage: ±15 V DC

Scope Of Delivery:
- Mains lead and earth-contact plug

Connecting lead universal converter

25-pole sub-D connecting lead with two plugs, shielded, soft rubber and uncrossed design, length 2 m to connect the COM3LAB Power Electronics Board with the 3 x 230 V universal converter, cat. no. 735 297.

For use in COM3LAB course PE II, cat. no. 700 22.
INDIVIDUAL COMPONENTS

PAM Modulator

Pulse amplitude modulation (PAM) is achieved by sampling an analog signal. It serves as a preliminary stage for generating PCM signals. The sampling procedure itself supplies PAM of the first type (natural PAM). A sample-and-hold stage is required additionally for generating PAM of the second type. The training panel contains all the units required for setting up a 2-channel time-MUX system:

- 2 x anti-aliasing filters
- 2 x samplers
- 2 x s&h stages
- 1 x multiplex control

A variable duty cycle and a freely selectable sampling frequency allow practical measurements of pulse sequences. Verification of the sampling theorem after Shannon including a display of oversampling and undersampling. Investigation of multiplex control in 2-channel mode is possible.

Technical Specifications:

- Cut-off-frequency of the low-pass filters: 3.4 kHz
- Sampling frequency: 1 kHz...10 kHz
- Duty cycle: 0.1...0.9
- Input voltage: -10 V...+ 10 V
- Outputs: PAM1, PAM2, clock generator
- Supply voltage: +/- 15 V DC

PAM Demodulator

Due to their spectral characteristics, PAM signals are demodulated with low-pass filters. The duty cycle is often increased in a series-connected sample-and-hold stage. The training panel contains all the receiving components required for setting up a 2-channel time-MUX system:

- 2 x low-pass demodulators
- 1 x S&H stage
- 1 x Demultiplex control

A connectable speaker is integrated to allow an acoustic examination of the effects of sampling.

Technical Specifications:

- Cut-off frequency of the low-pass filters: 3.4 kHz
- Duty cycle: 0.1...0.9
- Input voltage: -10 V...+ 10 V
- Outputs: Channel 1, channel 2, clock generator
- Supply voltage: ± 15 V DC

PCM Modulator

The sampled, discrete-time signal is quantized and coded in the PCM modulator. A fully digital (discrete time and value) signal is generated from the analog input signal of the PAM modulator. The PCM modulator allows an investigation of linear and nonlinear quantizing. The training panel also allows an investigation of DPCM (difference pulse code modulation) signals.

The device contains:

- 8-bit A/D converters
- LEDs for simultaneous display of all active bits
- Parallel/serial converters
- 13-segment compressor
- Predictor
- Clock control
- DC voltage source for coding experiments

Technical Specifications:

- Resolution: max. 8 bits, each bit can be deactivated individually
- Prediction (DPCM): previous sample prediction
- DC voltage source: -10 V...+ 10 V, with 10-turn potentiometer
- Input voltage: -10 V...+ 10 V
- Output: TTL level
- Supply voltage: ± 15 V DC
PCM Demodulator

The PCM demodulator receives the transmitted data and the clock signal serially via a common data line (transmission channel) from the PCM modulator. The PCM demodulator converts the received data back into a PAM signal. Experiments on companding can be performed together with the compressor of the PCM modulator. The training panel also allows the demodulation of DPCM signals.

The device contains:
• Serial/parallel converters
• LEDs for simultaneous display of the bits set high
• 13-segment expander
• D/A converter
• Predictor

Technical Specifications:
• Prediction (DPCM): previous sample predictions
• Input voltage: TTL level
• Output: -10 V...+10 V
• Supply voltage: ± 15 V DC

Gunn oscillator

The Gunn oscillator serves to generate microwave power. It has a modular design and can be broken down into the following components:
• Gunn diode module, length approx. 27 mm
• Rear housing wall
• Diaphragm with aperture, 8 mm diameter
• Waveguide adapter, 32 mm

Aluminium Gunn-diode module, Waveguide adapter with LD quick connectors.

Technical Specifications:
• Operating voltage: 8...10 V DC
• Current consumption: approx. 120 mA
• Operating frequency: 9.40 GHz
• Microwave power: > 10 mW, typically 15 mW
• Connection: BNC socket
• Waveguide type: R100
INDIVIDUAL COMPONENTS

Gunn Power Supply with SWR Meter

The Gunn power supply delivers the DC and control voltages required for the operation of the Gunn oscillator and PIN modulator and enables the demodulated microwave signal to be quantitatively evaluated. Furthermore, this unit has various inputs and outputs for experiments on modulation and characteristics.

Design: 19” table-top unit with stand.

Technical Specifications:

**Gunn Power Supply**
- **Gunn voltage**: -10 V < U_G < 0 V adjustable via 10-turn potentiometer, short-circuit proof
- **Gunn current**: max. 200 mA
- **Display**: 0...10 V, 0...200 mA, LED display for selected scale
- **Movement**: class 1.5 with mirror scale
- **Outputs/inputs**:
  - **GUNN**: DC supply of the Gunn oscillator
  - **XY**: for recording characteristics using an XY recorder
  - **DOPPLER OUT**: for experiments with Doppler radar
  - **MOD IN**: for direct modulation of the Gunn oscillator, input signal max. ±10 V

**PIN Modulator**
- **Clock oscillator**: 976 Hz, 0...5 V, 0...10 mA, short-circuit proof
- **Outputs/inputs**:
  - **PIN**: toggle switch position determines internal modulation through the clock oscillator or for external modulation
  - **MOD**: for external modulation of the PIN modulator, input signal max ±10 V

**Homodyne SWR Meter**
- **Principle**: Lock-in detection with internal synchronization through the clock oscillator
- **Dynamic range**: 0...55 dB can be set in 12 steps, additional 5 dB available via variable gain
- **Sensitivity**: 1 µVrms for full scale deflection
- **Accuracy**: ±0.3 dB over the whole range
- **Mid-frequency**: 976 Hz
- **Bandwidth**: 10 Hz
- **Display**:
  - **Power scale**: +0.5 dB...-20 dB (calibrated in dB for square-law detectors)
  - **SWR scale**: 1.00...5
  - **Linear scale**: 0...100 % (0 dB corresponds to 100 %)
  - **Movement**: class 1.5 with mirror scale
- **Inputs/outputs**:
  - **INPUT**: unbiased, impedance 10 kΩ
  - **AMP. OUT**: DC output for the measurement voltage

**Mod**
- **Inputs/outputs**:
  - **Input**: jointly for ANALOG and TTL, impedance 50 Ω
  - **Analogue Out**: analog signal max. ±2 V, bandwidth 1 MHz, gain approx. 30
  - **TTL Out**: TTL level
  - **All in-/outputs are connected with BNC sockets
  - **Mains connect.**: 115/230 V, 50 Hz, approx. 20 VA with mains connection cable and earthing-pin plug
- **Dimensions**: 500 x 330 x 150 mm (L x W x H)
- **Weight**: approx. 8 kg
PIN Modulator

The microwave signal is amplitude-modulated using the PIN modulator. When limited to a modulation frequency, detection can be carried out in very narrow bandwidths. The effects of noise and interference remain small, the sensitivity of the measurements is improved. The PIN modulator can be used in the linear characteristic range as an analog amplitude modulator and in switching mode for digital modulation.

Design:
Aluminium module with LD quick connectors.

Technical Specifications:
For \( f_0 = 9.40 \text{ GHz} \):
- Insertion loss \( a_T \) : approx. 1 dB
- Back reflection loss \( a_R \) : approx. 15 dB
- Operation voltage: 0...1.0 V DC
- Current consumption: 0...10 mA
- Modulation frequency: > 5 MHz
- Connection: BNC socket
- Waveguide type: R100

737 05 PIN Modulator

Unidirectional Line

The isolator (unidirectional line) is one of the nonreciprocal microwave components. Whereas a microwave traveling in the forward direction is subject to practically no attenuation, a wave traveling in the reverse direction is strongly absorbed. This component functions according to the field displacement law and is preferred for the decoupling of the oscillator from the rest of the measurement circuit.

Design: Waveguide built of aluminium.

Technical Specifications:
At \( f_0 = 9.40 \text{ GHz} \):
- Isolation: > 20 dB
- Insertion loss: < 1.5 dB
- SWR: < 1.25
- Waveguide type: R100
- Length: 13 mm
- Weight: 50 g

737 06 Unidirectional Line

Waveguide Detector

The waveguide detector is used for detecting and mixing microwave energy.

Design:
Aluminium module with LD quick connectors. With short-circuit plate and 2 screws.

Technical Specifications:
- Connection: BNC socket
- Waveguide type: R100

737 08 Waveguide Detector
INDIVIDUAL COMPONENTS

3-Screw Transformer

The 3-screw transformer is used to reduce mismatching, e.g. when matching horn antennas or other loads. It is also important for the generation of arbitrary reflections. As reactive elements the screws carry out the desired impedance transformation. The arrangement of the probes is slightly asymmetrical with respect to the flange planes. This enables better tuning in individual cases.

Design:
Aluminium module with LD quick-release connectors.

On the wide side of a rectangular waveguide there are 3 screws arranged along the centre line at a distance of 3/8 * LAMBDA. The screws act as probes and can be screwed completely into the waveguide. There is an insert nut provided in the base section for mounting a support.

Technical Specifications:
- Frequency range: 8.2 GHz...12.4 GHz
- Waveguide type: R100
- Length: 45 mm
- Weight: 150 g

Small Horn Antenna

Horn antenna used as feeding radiator for dish antennas, and for antenna gain measurements.

Design:
- Aluminium, red lacquer finish
- Dimensions (WxHxL): 54x31x39 (mm)
- Frequency range: 8 GHz...12 GHz
- Gain: 10 dB at 10 GHz
- Waveguide type: R100
- Incl. two thumb screws M4

Large horn antenna

Horn antenna use as feeding radiator for dish antennas, and for antenna gain measurements.

Technical Specifications:
- Frequency range: 8 GHz ... 12 GHz
- Gain: 15 dB at 10 GHz
- Waveguide type: R 100

Set of Microwave Absorbers

When conducting experiments in free space, especially when recording directional diagrams in antenna technology, a reflection-free measurement area is indispensable. With the aid of the absorbers an effectively anechoic chamber can be set-up with very little effort due to the small free space wavelength in the microwave range.

Consisting of:
- 6 absorbers approx. 500 x 500 x 60 (mm)
- 3 of them mounted on metal stands
GENERAL TERMS
CONDITIONS OF SALE
TECHNICAL SERVICE AND CONSULTING

LEYBOLD DOES NOT ONLY PROVIDE THE HIGHEST POSSIBLE PRODUCT QUALITY, BUT ALSO INDIVIDUAL ADVICE AND TECHNICAL AFTER-SALES SERVICE.

INDIVIDUAL ADVICE AND STOCK-TAKING

Are you planning to re-equip your laboratory or simply to add to its equipment? Our specialised advisor will be happy to give you support by suggesting a tailor-made combination suitable to your type of school.

GOODS SERVICE, INSTALLATION COMMISSIONING AND ON-SITE BRIEFING

We would be delighted to check your new equipment on site for completeness and functionality. We can either take on the whole task of installation for you or our specialists can commission the devices and systems that you have already installed on site yourselves. We would, of course, be delighted to conduct one or more tests together with you and to explain in detail the functions of each individual device.
TECHNICAL AFTER-SALES SERVICE

You may have a technical question on one of our devices or pieces of equipment. Our service team is available by telephone at +49 2233 604-430 and by e-mail at service@ld-didactic.de.

SPARE PARTS SERVICE

You can naturally order replacement parts for your equipment.

REPAIR SERVICE

If, despite our demanding quality standards, you should find a fault in your LEYBOLD product, we will naturally repair it as soon as possible. If you still cannot make the equipment work as intended after calling our technical service, you can find help quickly and easily through our „on-site service“. Our service technicians come to you, to find the appropriate technical solution on site. Alternatively, you can of course also send your device for repair by post.

REPAIR GUARANTEE FOR A MINIMUM OF 10 YEARS

Our products stand for high quality and durability. If your device should become faulty even many years after purchase, generally we will still be able to repair it. We guarantee the repair of all our devices for 10 years from the date of purchase – and for much of our products, for much longer.
GENERAL TERMS AND CONDITIONS OF SALE

as of: 09.01.2012

1. General
1.1 The following terms of sale apply exclusively for all deliveries, services and offers made by LD Didactic GmbH (hereinafter: LD) with respect to entrepreneurs, legal entities under public law or public separate assets (hereinafter: buyer). An entrepreneur is any natural or legal person exercising his/her commercial or independent occupational interests by concluding a legal transaction. Buyer conditions which are contrary to, or deviate from, these terms of sale are only recognized if they have been given express consent. The buyer's general terms of business shall also not be deemed applicable even though these General Terms and Conditions provide no applicable stipulation, are incomplete or ineffective.
1.2 These terms and conditions of sale shall also apply to all future business with the buyer to the extent they represent legal transactions of a related nature, even then when they have not again been expressly agreed.

2. Offer and acceptance period
2.1 Offers made by LD are subject to change and non-binding. An agreement between LD and the buyer materializes only then when LD accepts the buyer's order.
2.2 LD reserves the right to accept buyer orders within a period of three weeks after receipt of the buyer's order. With acceptance of the offer a binding contract is concluded.

3. Scope of performance
3.1 The quality as stated in the order confirmation (performance specification) is completely and finally determinative for the characteristics of the subject of delivery. In particular, the general public statements made by LD or the statements made by a supplier, his vicarious agents or any third party do not represent any supplementary or modifying description of the delivery subject.
3.2 Details contained in catalogues, brochures and quotation documents are non-binding to the extent they are not explicitly designated as binding.
3.3 In individual cases LD is entitled to structural modifications and the use of different materials when these measures are not adverse to any buyer interests meritng protection.
3.4 LD retains the property and proprietary rights to all documents furnished in conjunction with the buyer's order; such as calculations, drawings and so forth. These documents may not be made available to third parties without the written consent of LD.
3.5 Upon request, all documents which were furnished by LD shall be returned without delay. It shall not be necessary to request the return of such documents in the event the order is not issued to LD or LD declines order confirmation.

4. Pricing and terms of delivery
4.1 Prices shall be understood to be ex-works (INCO TERMS 2000). Installation and commissioning as well as additional deliveries and services will be additionally charged at cost price.
4.2 For orders delivered within Germany, shipping charges will be waived if the order amount equals or exceeds €150. For orders delivered within Germany amounting to less than €150, a flat rate of €15 net for shipping and handling will apply.
4.3 It should be noted that for foreign orders (i.e. outside Germany), the shipment to foreign delivery addresses and bank transfers for payment may result in additional taxes or costs which are not collected by LD or placed in the invoice.
4.4 LD shall additionally charge transaction taxes (turnover tax, etc.) in accordance with the given effective legal regulations.
4.5 Notwithstanding an express agreement to the contrary, LD shall, at the buyer's expense, insure ordered goods against the standard transport risks, including damage by breakage. Insofar as assembly, assembly supervision or commissioning is to be performed, the relevant LD terms and conditions shall apply additionally.

5. Transfer of risk
5.1 Upon contractual delivery, the risk of accidental deterioration or accidental destruction shall pass to the buyer.
5.2 In the event of a sale to destination according to buyer's instructions, the risk of accidental loss or deterioration shall pass to the buyer along with transfer to the person responsible for transport but not later than departure of the goods from the plant/warehouse. This also applies in the case of partial deliveries and when LD has assumed responsibility for other services.
5.3 If shipping is delayed due to circumstances for which LD is not responsible, the risk shall pass to the buyer when he is notified the delivery is ready for shipment.

6. Terms of delivery
6.1 Delivery dates or periods can be agreed in writing as binding or non-binding. Disregard for the written form has no influence on the effectiveness of the agreement. LD may exceed non-binding delivery periods by up to six weeks. Disregard for the written form has no influence on the effectiveness of the agreement. LD may exceed non-binding delivery periods by up to six weeks. LD is only in delay of performance after the six week grace period if a reminder is received from the buyer. If subsequent order changes are agreed then a new delivery date must also be agreed. Otherwise the delivery period shall be deemed extended for a reasonable amount of time.
6.2 The delivery period only begins after all commercial and technical prerequisites for executing the order have been clarified with the buyer, any documents to be procured by the buyer have been received by LD, any necessary permits and releases have been issued, and agreed advance payments have been credited to an LD bank account. The delivery deadline shall be deemed met when, up to its expiration – providing the buyer has fulfilled the above contractual obligations – the delivery item is turned over to the first carrier or the buyer has been advised the delivery is ready for shipment. Partial deliveries shall be admissible unless they are of no interest to the buyer. Delivered items, even when they exhibit minor defects, are to be accepted by the buyer; the delivery deadlines are thus deemed as met.
6.3 Delivery and performance delays due to Acts of God, natural catastrophes or because of blameless work conflicts, blameless transportation or business disturbances, blameless material defects, export permits not issued, and similar grounds at LD and/or its suppliers entitle LD to rescind the order completely or in part or to postpone the delivery deadline until the cause of delay has been alleviated – but not longer than two months – without recourse for the buyer against LD for neglect of duty. The buyer is entitled to withdraw from the order if the aforementioned grounds persist for longer than two months. The buyer remains free to exercise his legal rights of cancellation at an earlier point in time – for instance due to frustration of contract or blameless impossibility of performance on the part of LD.

7. Terms of payment
7.1 The net invoice amount is payable, without any discount, immediately upon receipt of invoice unless another payment period has been explicitly agreed. Partial deliveries shall entitle LD to invoice the respective partial delivery.
7.2 If the order purchase price is over €20,000 the buyer shall make a down payment equal to 50% of the purchase price. If the order purchase price is over €50,000 the buyer shall make full payment in advance.
7.3 The buyer is in default, without reminder, 14 days after the due date of LD entitlement and receipt of the invoice or delivery. In the event of default, LD is entitled, to demand interest at a rate of eight percentage points over the base interest rate of the European Central Bank. Proof of even higher damages incurred by LD is permissible anytime. The buyer is at liberty to prove the damages incurred by LD were lower.
7.4 Payments shall be effected exclusively to one of the appointed LD payment offices. They are to be effected on the date due on a postage- and expense-free basis without any deductions. Charges, expenses or other costs which may be incurred by LD in consequence of a separately agreed acceptance of bill of exchanges or checks shall be debited to the buyer. For payments of any kind, the day upon which LD is able to dispose over the amount in question shall be deemed the date of performance.
7.5 Offsettings balances and rights of lien may only be asserted with indisputable or legally established counterclaims.
7.6 LD is entitled to assign its claims against a buyer arising from a contract relationship in advance and/or subsequently, in particular for financing purposes.

8. Retention of title
8.1 Delivered items remain the property of LD until such time as all liabilities arising from the business relationship, including future or conditional claims, have been settled in full. In the event the buyer defaults on payment, LD is entitled to repossess the delivery item at issue (hereinafter: conditional commodity) without issuing a payment reminder demand. Insofar as the validity of retention of title is subject to mandatory special or legal prerequisites, the buyer shall ensure they are fulfilled.
8.2 To the extent he is not in default, the buyer shall be entitled dispose over the delivery item in the ordinary course of business. Claims which accrue to the buyer during the period of retention of title on the basis of resale or other legal grounds (including all balance receivables in current accounts) shall irrevocably be ceded in full amount to LD in advance as a form of security. Subject to revocation by LD, the buyer is empowered to collect such claims on a trust basis.
8.3 At the request of the buyer, LD shall undertake to release securities to which it is entitled, provided the value of such securities exceeds the unsettled claims to be secured by more than ten one-hundredths.
8.4 The buyer shall process and treat the delivery item on behalf of LD without giving rise to any obligation on the part of LD. If the delivery item is treated or combined, mixed or blended with objects which do not belong to LD (§§ 947 et seq. German Civil Code), LD shall be entitled to a co-ownership share in the new object at the ratio of the value of the delivery item to the other processed goods at the point in time before they were treated, combined mixed or blended. If the buyer acquires sole ownership pursuant to law, he hereby grants LD an appropriate co-ownership share or preserves the object for LD to this end. The provisions contained in item 8 also apply respectively to such co-ownership share.
8.5 The buyer shall immediately inform LD about any levy of distress or third party seizures with respect to the conditional commodities.
8.6 During retention of title, the buyer is obliged to adequately insure the delivery item at his own expense against theft, breakage, fire and water damage and, at the request of LD, furnish evidence to this effect. In the requested evidence is not presented within a reasonable period, LD shall be entitled to insure the delivered item at the expense of the buyer.

9. Warranty
9.1 For defects in the delivery item detected prior to the transfer of risk, LD is at its own option, entitled to either rectify such defects or make a replacement delivery (supplementary performance). The buyer shall bear the cost of return shipment for the defective item insofar as this cost is not disproportionate to the value of the item.
9.2 If supplementary performance proves to be unsuccessful, the buyer is entitled to request cancellation of sale or reduction of purchase price without prejudice to potential damage compensation claims. Supplementary performance is deemed to have failed when the defect has not been remedied after the third supplementary performance attempt.
9.3 Notification about defects must be made upon delivery without delay. Notification about hidden defects shall take place promptly after their discovery. Such notifications shall state which defects have been detected and whether they were noticed immediately or only after further processing of the parts at issue. LD is entitled to have their own personnel inspect the deficiency.
9.4 When a claim for damage compensation is not involved, defect claims become time-barred after 24 months for users and after 12 months for companies, both stated periods beginning with delivery of the goods. Claims for damage compensation as a consequence of redivisible defects lapse 12 months after delivery of the goods except in cases of personal injury damages, deliberate neglect of duty or gross neglect of duty. The statutory limit for legal claims under a right of supplementary performance attempt.
9.5 The buyer does not have the right to withdraw from contract except in the case of neglect of duty for which LD is blameless. The right of termination pursuant to § 649 German Civil Code remains unaffected. If LD is to carry out an adaptation of performance in order to comply with the buyer’s order requirements (contract for work), the buyer must provide adequate compensation if he chooses to withdraw from the contract by termination. The amount of compensation shall be commensurate with the necessary overhead already exerted at the point in time the declaration of withdrawal is made, maximum compensation being the agreed contract price. The purchaser is at liberty to prove that less overhead was incurred.

10. Liability for usage other than originally intended
10.1 None of the products sold by LD are intended for private consumers (private end users) but rather intended exclusively for use in educational institutions such as general and vocational schools, technical colleges, universities, private or public training centers and industrial operations (intended use).
10.2 If the buyer allows third-party private usage of the goods, either occasionally or continuously, regardless of the manner or lawful reason then the buyer has abandoned intended use.
10.3 In this case the buyer releases LD from all contractual or legal obligations, claims and duties, including claims under the product liability law, that were associated with original intended use.
11. Liability for property right infringements

11.1 Insofar as LD makes no special notification, the delivery item is deemed to be free of third party property rights with respect to awareness of state-of-the-art technology in the Federal Republic of Germany. However, if the delivery item or a part of the same should, at the point in time of contract conclusion, infringe on a property right which has already been issued and published in the Federal Republic of Germany, or if the delivery item explicitly incorporates a particular protected procedural right or infringes on a corresponding procedural right, and consequently results in the instigation of legal proceedings against the buyer then, at its own option and within a reasonable period, LD shall either obtain for the buyer the right of continued utilization, modify the delivery item, part or procedure such that an infringement of third-party rights no longer exists, or withdraw from the contract. LD does not accept any further liability, particularly for procedures, applications and products, etc. Claims against LD for liability due to property right infringements are limited to foreseeable damages.

11.2 In the event third-party property rights are infringed upon by drawings or details furnished by the buyer, the buyer shall be responsible for such infringement and indemnify LD against claim.

12. Repairs

Repairs and returns will be handled by LD exclusively under the following conditions. LD does not recognize any deviating buyer conditions.

12.1. Order / cost estimate / repair

12.1.1 LD will perform repairs only after receiving a written order.

12.1.2 LD will issue an order confirmation for the device received.

12.1.3 Cost estimates will only be created at the express request of the ordering party. A cost estimate lump-sum fee of 51.00 Euro will be levied for devices having a replacement value less than 500.00 Euro and 151.00 Euro when replacement value is over 500,00 Euro. When a repair order is issued the cost estimate lump-sum fee will be waived.

12.1.4 Repairs made under guarantee will only be performed if a completely filled out return form accompanies the repair return shipment. In this case, the established General Standard Terms and Conditions shall apply.

12.1.5 Necessitated by organisational grounds, LD reserves the right to delegate repair work to an LD authorized contract workshop.

12.1.6 Repair orders are accepted subject to the procurement of replacement parts.

12.2. Shipment

12.2.1 If an order is not placed within one month of the date when the cost estimate is issued, the device will be returned without repair.

12.2.2 Incurred shipping charges for devices returned without repair, when neither a cost estimate nor a repair order has been issued, shall be borne by the recipient.

12.2.3 Return shipment of all devices is carried out at the expense and risk of the customer. On request, LD will insure the device against transport damage and loss at the customer’s expense. If transport damage or breakage is determined, application is to be made to the carrier for an assessment of facts. Entitlement to claims for damage will otherwise be lost. 12.3 Defect claims and liability

12.3.1 Repair service defects apparent within a period of limitation which were already present prior to the transfer of risk will be reworked by LD within a reasonable time at no charge.

12.3.2 If the rework fails, the buyer can withdraw from the contract or reduce remuneration.

12.3.3 Entitlement to make defect claims expires 12 months after acceptance.

12.3.4 After the transfer of risk, there is no entitlement to defect claims for normal wear, for damage ensuing from excessive stresses, for unsuitable equipment or for damage due to exceptional external influences for which the contract has no provisions.

12.3.5 If the buyer or third parties make unauthorized modifications or repairs then there shall be no recourse to defect claims arising from these or any consequences thereof.

12.3.6 Buyer claims for damage and reimbursement of expenses are excluded, regardless of legal grounds, but in particular with respect to pre-contractual breach of duty, breach of duty arising from indebtedness and tortuous liability. This does not apply insofar as liability is mandatory, e.g. in cases of intent and gross neglect, with respect to harm of life, limb or health and for violation of essential contract obligations. However, damage claim compensation for violation of essential contract obligations is limited to contract-typical foreseeable damages insofar as intent or gross negligence is not given.

12.3.7 No liability is accepted for consumables included with delivery, such as film material, batteries, etc.

13. Other liabilities / liability exclusions

13.1 With respect to breaches of contractual and extra-contractual obligations, particularly due to impossibility, delay, and tortuous trade, LD – and/or its vicarious agents – shall be liable only in cases of intent and gross negligence, limited to contract typical foreseeable damage when the contract was concluded.

13.2 These limitations do not apply for culpable breach of essential contractual obligations by LD, if fulfilment of the purpose of the contract is endangered, in cases of mandatory liability under the product liability law, by harm to life, limb or health (personal injury), and also not then when LD has deceitfully concealed defects or guaranteed their absence. The rules of burden of proof remain unaffected by this. Essential contract obligations are those LD obligations that enable proper execution of the contract in the first place and on whose observance the buyer can generally expect to have trust.

14. Place of performance, jurisdiction, severability clause

14.1 The place of performance shall be Hürth, Germany, unless specified to the contrary in the order confirmation.

14.2 The place of jurisdiction is that of the business headquarters for LD Didactic GmbH, currently Hürth, Germany.

14.3. Should a provision of these Terms and Conditions or a condition in the context of other agreements be or become invalid, this shall not impair the validity of all remaining provisions or agreements.

15. Applicable law

The laws of the Federal Republic of Germany shall apply. The application of the standard UN Convention on Contracts for the International Sale of Goods (CISG) is excluded.

Note pursuant to the Federal Data Protection Act LD stores and processes customer data.
